## GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	<u>5-12</u> ft
Distance to the nearest drinking-water well:	_____ ft

LIKELIHOOD OF RELEASE	A	B	Refere
	Suspected Release	No Suspected Release	
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	(550) 550		
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.		(500 or 340)	
LR =	550		

TARGETS	A	B	Refere
3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). <u>0</u> people x 10 =	0		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.	15		
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	(50, 20, 18, 9, 5, 3, 2, or 0) 20	(20, 18, 9, 5, 3, 2, or 0)	
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	(20, 5, or 0) 0	(20, 5, or 0)	
7. RESOURCES: A score of 5 is assigned.	(5) 5	(5) 5	
T =	40		

WASTE CHARACTERISTICS	A	B	Refere
8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	(100 or 32) 18		
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	(100, 32, or 18) 18	(100, 32, or 18)	
WC =	18		

GROUND WATER PATHWAY SCORE:

$$\frac{LR \times T \times WC}{82,500}$$

(subject to a maximum of 100)
4.8

NOV 06 1990

## **SURFACE WATER PATHWAY**

**Migration Route Sketch:** Sketch the surface water migration pathway illustrating the drainage route and identifying water bodies, the probable point of entry, flows, and targets.

See report sections 3.1 and 3.2.

**DRAFT**

Site Name:

Date:

NOV 08 1990

**SURFACE WATER PATHWAY  
MIGRATION ROUTE SKETCH**

**Provide a Sketch of the Surface Water Migration Route:**

(include runoff route, probable point of entry, 15-mile target distance limit, intakes, fisheries, and sensitive environments)

See report sections 3.1 and 3.2.

**SURFACE WATER PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of some conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the responses for the target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

SURFACE WATER PATHWAY							
SUSPECTED RELEASE				PRIMARY TARGETS			
Y	N	UNKNOWN		Y	N	UNKNOWN	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is surface water nearby?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is any target nearby? If yes:
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Is waste quantity particularly large?				<input type="checkbox"/> Drinking-water intake
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Is the drainage area large?				<input type="checkbox"/> Fishery

Site Name:  
Data:

**SURFACE WATER PATHWAY  
LIKELIHOOD OF RELEASE AND DRINKING WATER THREAT SCORESHEET**

Pathway Characteristics	
Do you suspect a release (see Surface Water Pathway Criteria List, page 11)?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Distance to surface water:	<u>1000</u> ft
Flood Frequency:	_____ yrs
What is the downstream distance to the nearest drinking-water intake?	<u>5</u> miles
nearest fishery? <u>4</u> miles	nearest sensitive environment? <u>1</u> miles

**LIKELIHOOD OF RELEASE**

- SUSPECTED RELEASE:** If you suspect a release to surface water (see page 11), assign a score of 550, and use only column A for this pathway.
  - NO SUSPECTED RELEASE:** If you do not suspect a release to surface water, and the distance to surface water is 2,500 feet or less, assign a score of 500; otherwise, assign a score from the table below. Use only column B for this pathway.
- | Floodplain                         | Score |
|------------------------------------|-------|
| Site in annual or 10-yr floodplain | 500   |
| Site in 100-yr floodplain          | 400   |
| Site in 500-yr floodplain          | 300   |
| Site outside 500-yr floodplain     | 100   |

A	B	Referer
Suspected Release	No Suspected Release	
(550) 550	(500, 400, 300 or 100)	
LR = 550 (550)	(500, 400, 300 or 100)	

**DRINKING WATER THREAT TARGETS**

- Determine the water body types, flows (if applicable), and number of people served by all drinking-water intakes within the 15-mile target distance limit. If there are no drinking-water intakes within the target distance limit, assign a total Targets score of 5 at the bottom of this page (Resources only) and proceed to page 14.

Intake Name	Water Body Type	Flow	People Served
City of Sandusky	Great Lake	N/A cfs	47,000
City of Huron	Great Lake	N/A cfs	7,000
		cfs	

- PRIMARY TARGET POPULATION:** If you suspect any drinking-water intake listed above has been exposed to hazardous substances from the site (see Surface Water Pathway Criteria List, page 11), list the intake name(s) and calculate the factor score based on the number of people served.

\_\_\_\_\_ people x 10 = 0

- SECONDARY TARGET POPULATION:** Determine the Secondary Target Population score from PA Table 3 based on the populations using drinking-water from intakes that you do NOT suspect have been exposed to hazardous substances from the site.

Are any intakes part of a blended system? Yes  No   
If yes, attach a page to show apportionment calculations.

- NEAREST INTAKE:** If you have identified any Primary Targets for the drinking water threat (Factor 4), assign a score of 50; otherwise, assign the Nearest Intake score from PA Table 3. If no drinking-water intake exists within the 15-mile target distance limit, assign a score of zero.

- RESOURCES:** A score of 5 is assigned.

**SOIL EXPOSURE PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident populations. The chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

SOIL EXPOSURE PATHWAY

SOIL EXPOSURE PATHWAY SCORESHEET

Pathway Characteristics	
Do any people live on or within 200 ft of areas of suspected contamination?	Yes ___ No <u>✓</u>
Do any people attend school or day care on or within 200 ft of areas of suspected contamination?	Yes ___ No ___
Is the facility active? Yes <u>✓</u> No ___ If yes, estimate the number of workers: <u>150</u>	

LIKELIHOOD OF EXPOSURE		A	B	Reference
		Suspected Contamination	No Suspected Contamination	
1. SUSPECTED CONTAMINATION: Surficial contamination is assumed. A score of 550 is assigned.	LE =	(550) 550		

RESIDENT POPULATION THREAT TARGETS

2. RESIDENT POPULATION: Determine the number of people occupying residences or attending school or day care on or within 200 feet of areas of suspected contamination (see Soil Exposure Pathway Criteria List, page 18). <u>0</u> people x 10 =		0												
3. RESIDENT INDIVIDUAL: If you have identified any Resident Population (Factor 2), assign a score of 50; otherwise, assign a score of 0.		0												
4. WORKERS: Assign a score from the following table based on the total number of workers at the facility and nearby facilities with suspected contamination:														
<table border="1"> <thead> <tr> <th>Number of Workers</th> <th>Score</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> </tr> <tr> <td>1 to 100</td> <td>5</td> </tr> <tr> <td>101 to 1,000</td> <td>10</td> </tr> <tr> <td>&gt; 1,000</td> <td>15</td> </tr> </tbody> </table>	Number of Workers	Score	0	0	1 to 100	5	101 to 1,000	10	> 1,000	15		10		
Number of Workers	Score													
0	0													
1 to 100	5													
101 to 1,000	10													
> 1,000	15													
5. TERRESTRIAL SENSITIVE ENVIRONMENTS: Assign a value from PA Table 7 for each terrestrial sensitive environment that is located on an area of suspected contamination:														
<table border="1"> <thead> <tr> <th>Terrestrial Sensitive Environment Type</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td> </td> <td> </td> </tr> <tr> <td> </td> <td> </td> </tr> </tbody> </table>	Terrestrial Sensitive Environment Type	Value						0						
Terrestrial Sensitive Environment Type	Value													
6. RESOURCES: A score of 5 is assigned.	Sum =	5												
	T =	15												

WASTE CHARACTERISTICS

7. Assign the waste characteristics score calculated on page 4.	WC =	(100, 22, or 18) 18		
---	------	------------------------	--	--

RESIDENT POPULATION THREAT SCORE:

$$\frac{LE \times T \times WC}{82,500}$$

(subject to a maximum of 100)  
1.8

NEARBY POPULATION THREAT SCORE:

Assign a score of 2

2

SOIL EXPOSURE PATHWAY SCORE:

Resident Population Threat + Nearby Population Threat

(subject to a maximum of 100)  
3.8

NOV 06 1990

PA TABLE 7: SOIL EXPOSURE PATHWAY  
TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned Value</i>
Terrestrial critical habitat for Federally designated endangered or threatened species	100
National Park	
Designated Federal Wilderness Area	
National Monument	
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species	75
National Preserve (terrestrial)	
National or State terrestrial Wildlife Refuge	
Federal land designated for protection of natural ecosystems	
Administratively proposed Federal Wilderness Area	
Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	
Terrestrial habitat used by State designated endangered or threatened species	50
Terrestrial habitat used by species under review for Federally designated endangered or threatened status	
State lands designated for wildlife or game management	25
State designated Natural Areas	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

# AIR PATHWAY CRITERIA LIST

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY			
SUSPECTED RELEASE			PRIMARY TARGETS

<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Have odors been reported?
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Has a release of hazardous substances to the air been directly observed?
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Is there any circumstantial evidence of an air release?
<input type="checkbox"/>	<input checked="" type="checkbox"/>		Other criteria? _____
<input type="checkbox"/>	<input checked="" type="checkbox"/>		<b>SUSPECTED RELEASE?</b>

*If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.*

Summarize the rationale for suspected release (attach an additional page if necessary):

NOV 06 1990

AIR PATHWAY SCORESHEET

<i>Pathway Characteristics</i>	
Do you suspect a release (see Air Pathway Criteria List, page 21)?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Distance to the nearest individual:	_____ ft

**LIKELIHOOD OF RELEASE**

	A	B	Reference:
	<i>Suspected Release</i>	<i>No Suspected Release</i>	
1. <b>SUSPECTED RELEASE:</b> If you suspect a release to air (see page 21), assign a score of 550, and use only column A for this pathway.	(550)		
2. <b>NO SUSPECTED RELEASE:</b> If you do not suspect a release to air, assign a score of 500, and use only column B for this pathway.		(500)  500	
<b>LR =</b>		500	

**TARGETS**

3. <b>PRIMARY TARGET POPULATION:</b> Determine the number of people subject to exposure from a release of hazardous substances through the air (see Air Pathway Criteria List, page 21). _____ people x 10 =									
4. <b>SECONDARY TARGET POPULATION:</b> Determine the number of people within the 4-mile target distance limit, and assign the total population score from PA Table 8.		25							
5. <b>NEAREST INDIVIDUAL:</b> If you have identified any Primary Targets for the air pathway, assign a score of 50; otherwise, assign the highest Nearest Individual score from PA Table 8.	(50, 20, 7, 2, 1, or 0)	(20, 7, 2, 1, or 0)  20							
6. <b>PRIMARY SENSITIVE ENVIRONMENTS:</b> Sum the sensitive environment values (PA Table 5) and wetland acreage values (PA Table 9) for environments subject to exposure from air hazardous substances (see Air Pathway Criteria List, page 21).	<b>Sum =</b>								
<table border="1" style="margin: auto; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;"><i>Sensitive Environment Type</i></th> <th style="text-align: left;"><i>Value</i></th> </tr> </thead> <tbody> <tr> <td>_____</td> <td>_____</td> </tr> <tr> <td>_____</td> <td>_____</td> </tr> </tbody> </table>	<i>Sensitive Environment Type</i>	<i>Value</i>	_____	_____	_____	_____			
<i>Sensitive Environment Type</i>	<i>Value</i>								
_____	_____								
_____	_____								
7. <b>SECONDARY SENSITIVE ENVIRONMENTS:</b> Use PA Table 10 to determine the score for secondary sensitive environments.		0							
8. <b>RESOURCES:</b> A score of 5 is assigned.	(5) <b>5</b>	(5) <b>5</b>							
<b>T =</b>		50							

**WASTE CHARACTERISTICS**

9. <b>A.</b> If you have identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	(100 or 32)		
<b>B.</b> If you have NOT identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4.	(100, 32, or 18)	(100, 32, or 18)  18	
<b>WC =</b>		18	

**AIR PATHWAY SCORE:**

$\frac{LR \times T \times WC}{82,500}$

GROUND WATER PATHWAY SCORE (S <sub>gw</sub> ):	4.80	23.04
SURFACE WATER PATHWAY SCORE (S <sub>sw</sub> ):	2.16	4.67
SOIL EXPOSURE PATHWAY SCORE (S <sub>se</sub> ):	3.8	14.44
AIR PATHWAY SCORE (S <sub>a</sub> ):	5.45	29.7
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{se}^2 + S_a^2}{4}} = 4.24$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?  A. If yes, identify the wells recommended for sampling during the SI. _____  B. If yes, how many people are served by these threatened wells? _____	<input type="checkbox"/>    <input type="checkbox"/>	<input type="checkbox"/>    <input type="checkbox"/>
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?  A. Drinking water intake B. Fishery C. Sensitive environment: wetland, critical habitat, others D. If yes, identify the targets recommended for sampling during the SI. _____ _____	<input type="checkbox"/>    <input type="checkbox"/>    <input type="checkbox"/>	<input type="checkbox"/>    <input type="checkbox"/>    <input type="checkbox"/>
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:  _____ _____	<input type="checkbox"/>	<input type="checkbox"/>

# GROUND WATER PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

## GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	25 ft
Distance to the nearest drinking-water well:	2112 ft

LIKELIHOOD OF RELEASE	A	B	Referen
	Suspected Release (550)	No Suspected Release (500 or 340)	
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	550		
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.			
LR =	550		

### TARGETS

3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). $0$ people $\times 10 =$	0	
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.	15	
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	20	
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	0	
7. RESOURCES: A score of 5 is assigned.	5	5
T =	40	

### WASTE CHARACTERISTICS

8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	100	
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.		
WC =	100

**SURFACE WATER PATHWAY  
MIGRATION ROUTE SKETCH**

**Provide a Sketch of the Surface Water Migration Route:**

(include runoff route, probable point of entry, 15-mile target distance limit, intakes, fisheries, and sensitive environments)

See report sections 3.1 and 3.2.

SURFACE WATER PATHWAY CRITERIA LIST

Site Name:  
Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of some conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the responses for the target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

## SURFACE WATER PATHWAY WASTE CHARACTERISTICS, THREAT, AND PATHWAY SCORE

### Waste Characteristics (WC)

14. Waste Characteristics score is assigned from page 4. However, if any Primary Target has been identified for any surface water threat, assign the higher of the score calculated on page 4 or a score of 32.

### Surface Water Pathway Threat Scores

Fill in the matrix with the appropriate scores from the previous pages. To calculate the score for each threat: multiply the scores for LR, T and WC, divide the product by 82,500, and round the result to the nearest integer. The Drinking Water Threat and Human Food Chain Threat are subject to a maximum of 100. The Environmental Threat is subject to a maximum of 60. Enter the rounded threat scores into the right side of the table.

### Surface Water Pathway Score

Sum the individual threat scores to determine the Surface Water Pathway Score. If the sum is greater than 100, assign 100.

Terrestrial Sensitive Environment Type	Value												
6. RESOURCES: A score of 5 is assigned.	5												
Sum =	15												
T =	15												

WASTE CHARACTERISTICS			
7. Assign the waste characteristics score calculated on page 4. WC =	100		

RESIDENT POPULATION THREAT SCORE:	$\frac{LE \times T \times WC}{82,500}$	<small>(subject to a maximum of 100)</small> 10
NEARBY POPULATION THREAT SCORE: <i>Assign a score of 2</i>		2
SOIL EXPOSURE PATHWAY SCORE: Resident Population Threat + Nearby Population Threat		<small>(subject to a maximum of 100)</small> 12

SOIL EXPOSURE PATHWAY

Pathway Characteristics

Answer the questions at the top of the page. Identify people who are most likely to be regularly exposed to contamination at the site because they work at the facility or reside or attend school or day care on or within 200 feet of an area of suspected contamination. If the site is active, estimate the number of full or part-time workers at this facility. Note that evaluation of targets is based on current site conditions.

Likelihood of Exposure (LE)

1. **Suspected Contamination:** The PA always assumes that surficial contamination exists. Do not override this assumption. Surficial contamination often exists even if wastes have been "removed" or are believed to be buried below the surface. A 550 is automatically assigned for this factor; only Column A can be scored for this pathway.

Resident Population Threat Targets (T)

2. **Resident Population** corresponds to "primary targets" for the migration pathways. Determine if there are people living or attending school or day care on or within 200 feet of areas of suspected contamination. Use professional judgment guided by the Soil Exposure Pathway Criteria List (page 18) to make this determination. Record the number of people identified as Resident Population. Multiply this population by 10 to determine the Resident Population factor score.

3. **Resident Individual:** If you have identified a Resident Population, assign a score of 50. Otherwise, assign a score of 0.

4. **Workers:** Estimate the number of full and part-time workers regularly present at this facility and other facilities where contamination is suspected. Assign a score for the workers factor from the table.

5. **Terrestrial Sensitive Environments:** In the table provided, list each Terrestrial Sensitive Environment located on areas of suspected contamination. Use PA Table 7 (page 20) to assign a value for each sensitive environment. Sum the values of all the terrestrial sensitive environments and assign the total as the factor score.

6. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A.

Waste Characteristics (WC)

7. Enter the WC score determined on page 4. There is no exception for this pathway.

**Soil Exposure Pathway Score:** Calculate the Resident Population Threat Score by multiplying the scores for LE, T, and WC, and dividing the product by 82,500. Round the threat score to the nearest integer. If the result is greater than 100, assign 100. The Nearby Population Threat Score is always 2 for the PA; do not override this score. Add these 2 points to the calculated Resident Population Threat Score to determine the Soil Exposure Pathway Score, subject to a maximum of 100.

TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned Value</i>
Terrestrial critical habitat for Federally designated endangered or threatened species	100
National Park	
Designated Federal Wilderness Area	
National Monument	
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species	75
National Preserve (terrestrial)	
National or State terrestrial Wildlife Refuge	
Federal land designated for protection of natural ecosystems	
Administratively proposed Federal Wilderness Area	
Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	
Terrestrial habitat used by State designated endangered or threatened species	50
Terrestrial habitat used by species under review for Federally designated endangered or threatened status	
State lands designated for wildlife or game management	25
State designated Natural Areas	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

# AIR PATHWAY CRITERIA LIST

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY

		Is there any circumstantial evidence of an air release?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
		Other criteria? _____	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
		<b>SUSPECTED RELEASE?</b>	

Summarize the rationale for suspected release (attach an additional page if necessary):

Pathway Characteristics

Answer the questions at the top of the page. Refer to the Air Pathway Criteria List (page 21) to hypothesize whether you suspect hazardous substances have been released from the site to the air. Due to dispersion, releases to air are not as persistent as releases to water migration pathways and are much more difficult to detect. Develop hypotheses concerning the release of hazardous substances to air based on "real time" considerations. Record the distance (in feet) from any source to the nearest regularly occupied building.

Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Air Pathway Criteria List (page 21). Remember to use only Column A for this pathway if you score a Suspected Release, and proceed to the target evaluation section.
2. **No Suspected Release:** If you do not score a Suspected Release, enter 500. Remember to use only Column B to score this pathway if you do not suspect hazardous substances are being released.

Targets (T)

3. **Primary Target Population** are those people subject to exposure from a suspected air release of hazardous substances from the site. Use professional judgment, guided by the Air Pathway Criteria List (page 21), to make this determination. Note that if you do not suspect a release, there are no primary population targets. If you score a Suspected Release, record the residential, student, and worker population located on or within ¼-mile of the site. Multiply this number of people by 10; enter the factor score in Column A.
4. **Secondary Target Population** are those people in distance categories not suspected to be subject to exposure from airborne hazardous substances. Determine the number of residents, students, and workers, and enter the summed population in PA Table 8 (page 23) for each distance category. Circle the population value for the distance category and record the value in the far right column of the table. Sum these values and enter the total as the factor score.
5. **Nearest Individual** represents the threat posed to the person most likely to be exposed to hazardous substances released from the site. If you have identified any Primary Population, enter 50. Otherwise, assign the score from the "Nearest Individual" column of PA Table 8 (page 23), for the nearest distance ring in which you have identified a Secondary Population.
6. **Primary Sensitive Environments:** List the sensitive environments (on or within ¼ mile of the site) subject to exposure from a suspected air release of hazardous substances from the site. Assign values for sensitive environment type (from PA Table 5, page 16) and/or wetland acreage (from PA Table 9, page 23). Sum the values and enter the total as the factor score.
7. **Secondary Sensitive Environments:** On PA Table 10 (page 23), list the sensitive environments that are in distance categories within ½ mile not suspected to be subject to exposure from airborne hazardous substances. Assign a value for each environment (PA Tables 5 and 9). Record the value for each Secondary Sensitive Environment on PA Table 10 (page 23), and multiply by the distance weight for that distance category. Sum the products, and enter the total as the factor score.
8. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

Waste Characteristics (WC)

9. **Waste Characteristics** score is assigned from page 4. However, if any Primary Target has been identified for the air pathway, assign the higher of the score calculated on page 4 or a score of 32.

**Air Pathway Score:** Multiply the scores for LR, T, and WC. Divide the product by 82,500. Round the result to the nearest integer. If the result is greater than 100, assign 100.

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.

SITE SCORE CALCULATION

	S	S <sup>2</sup>
GROUND WATER PATHWAY SCORE (S <sub>gw</sub> ):	26.66	710.76
SURFACE WATER PATHWAY SCORE (S <sub>sw</sub> ):	12	144
SOIL EXPOSURE PATHWAY SCORE (S <sub>so</sub> ):	12	144
AIR PATHWAY SCORE (S <sub>a</sub> ):	30.3	918.1
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{so}^2 + S_a^2}{4}} = 21.9$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?  A. If yes, identify the wells recommended for sampling during the SI. _____	<input type="checkbox"/>	<input type="checkbox"/>
B. If yes, how many people are served by these threatened wells? _____		
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?  A. Drinking water intake B. Fishery C. Sensitive environment: wetland, critical habitat, others D. If yes, identify the targets recommended for sampling during the SI. _____ _____	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain: _____	<input type="checkbox"/>	<input type="checkbox"/>

# GROUND WATER PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the responses for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	_____ ft
Distance to the nearest drinking-water well:	_____ ft

LIKELIHOOD OF RELEASE	A	B	Referen
	Suspected Release	No Suspected Release	
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	(550)		
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.		(500 or 340) 00	
LR =		500	

TARGETS	A	B
3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). _____ people x 10 =		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.		15
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	(50, 20, 10, 0, 5, 3, 2, or 0)	(20, 10, 0, 5, 3, 2, or 0) 20
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	(20, 5, or 0)	(20, 5, or 0) 0
7. RESOURCES: A score of 5 is assigned.	(5) 5	(5) 5
T =		40

WASTE CHARACTERISTICS	A	B
8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	(100 or 32)	
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	(100, 32, or 18)	(100, 32, or 18) 18
WC =		18

GROUND WATER PATHWAY SCORE:  $\frac{LR \times T \times WC}{82,500}$  (subject to a maximum of 100)

See report sections 3.1 and 3.2.

**SURFACE WATER PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of some conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the responses for the target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

NOV 06 1990

## SURFACE WATER PATHWAY WASTE CHARACTERISTICS, THREAT, AND PATHWAY SCORE

### Waste Characteristics (WC)

14. Waste Characteristics score is assigned from page 4. However, if any Primary Target has been identified for any surface water threat, assign the higher of the score calculated on page 4 or a score of 32.

### Surface Water Pathway Threat Scores

Fill in the matrix with the appropriate scores from the previous pages. To calculate the score for each threat: multiply the scores for LR, T and WC, divide the product by 82,500, and round the result to the nearest integer. The Drinking Water Threat and Human Food Chain Threat are subject to a maximum of 100. The Environmental Threat is subject to a maximum of 60. Enter the rounded threat scores into the right side of the table.

### Surface Water Pathway Score

Sum the individual threat scores to determine the Surface Water Pathway Score. If the sum is greater than 100, assign 100.

WASTE CHARACTERISTICS

7. Assign the waste characteristics score calculated on page 4.	WC =	18	
---	------	----	--

RESIDENT POPULATION THREAT SCORE:

$$\frac{LE \times T \times WC}{82,500}$$

(subject to a maximum of 100)  
1.8

NEARBY POPULATION THREAT SCORE:

Assign a score of 2

2

SOIL EXPOSURE PATHWAY SCORE:

Resident Population Threat + Nearby Population Threat

(subject to a maximum of 100)  
3.8

SOIL EXPOSURE PATHWAY

Pathway Characteristics

Answer the questions at the top of the page. Identify people who are most likely to be regularly exposed to contamination at the site because they work at the facility or reside or attend school or day care on or within 200 feet of an area of suspected contamination. If the site is active, estimate the number of full or part-time workers at this facility. Note that evaluation of targets is based on current site conditions.

Likelihood of Exposure (LE)

1. **Suspected Contamination:** The PA always assumes that surficial contamination exists. Do not override this assumption. Surficial contamination often exists even if wastes have been "removed" or are believed to be buried below the surface. A 550 is automatically assigned for this factor; only Column A can be scored for this pathway.

Resident Population Threat Targets (T)

2. **Resident Population** corresponds to "primary targets" for the migration pathways. Determine if there are people living or attending school or day care on or within 200 feet of areas of suspected contamination. Use professional judgment guided by the Soil Exposure Pathway Criteria List (page 18) to make this determination. Record the number of people identified as Resident Population. Multiply this population by 10 to determine the Resident Population factor score.

3. **Resident Individual:** If you have identified a Resident Population, assign a score of 50. Otherwise, assign a score of 0.

4. **Workers:** Estimate the number of full and part-time workers regularly present at this facility and other facilities where contamination is suspected. Assign a score for the workers factor from the table.

5. **Terrestrial Sensitive Environments:** In the table provided, list each Terrestrial Sensitive Environment located on areas of suspected contamination. Use PA Table 7 (page 20) to assign a value for each sensitive environment. Sum the values of all the terrestrial sensitive environments and assign the total as the factor score.

6. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A.

Waste Characteristics (WC)

7. Enter the WC score determined on page 4. There is no exception for this pathway.

**Soil Exposure Pathway Score:** Calculate the Resident Population Threat Score by multiplying the scores for LE, T, and WC, and dividing the product by 82,500. Round the threat score to the nearest integer. If the result is greater than 100, assign 100. The Nearby Population Threat Score is always 2 for the PA; do not override this score. Add these 2 points to the calculated Resident Population Threat Score to determine the Soil Exposure Pathway Score, subject to a maximum of 100.

PA TABLE 7: SOIL EXPOSURE PATHWAY  
TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned Value</i>
Terrestrial critical habitat for Federally designated endangered or threatened species	100
National Park	
Designated Federal Wilderness Area	
National Monument	
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species	75
National Preserve (terrestrial)	
National or State terrestrial Wildlife Refuge	
Federal land designated for protection of natural ecosystems	
Administratively proposed Federal Wilderness Area	
Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	
Terrestrial habitat used by State designated endangered or threatened species	50
Terrestrial habitat used by species under review for Federally designated endangered or threatened status	
State lands designated for wildlife or game management	25
State designated Natural Areas	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

# AIR PATHWAY CRITERIA LIST

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

			AIR PATHWAY

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Have odors been reported?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has a release of hazardous substances to the air been directly observed?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there any circumstantial evidence of an air release?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Other criteria? _____	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<b>SUSPECTED RELEASE?</b>	

*If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.*

Summarize the rationale for suspected release (attach an additional page if necessary):

Pathway Characteristics

Answer the questions at the top of the page. Refer to the Air Pathway Criteria List (page 21) to hypothesize whether you suspect hazardous substances have been released from the site to the air. Due to dispersion, releases to air are not as persistent as releases to water migration pathways and are much more difficult to detect. Develop hypotheses concerning the release of hazardous substances to air based on "real time" considerations. Record the distance (in feet) from any source to the nearest regularly occupied building.

Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Air Pathway Criteria List (page 21). Remember to use only Column A for this pathway if you score a Suspected Release, and proceed to the target evaluation section.
2. **No Suspected Release:** If you do not score a Suspected Release, enter 500. Remember to use only Column B to score this pathway if you do not suspect hazardous substances are being released.

Targets (T)

3. **Primary Target Population** are those people subject to exposure from a suspected air release of hazardous substances from the site. Use professional judgment, guided by the Air Pathway Criteria List (page 21), to make this determination. Note that if you do not suspect a release, there are no primary population targets. If you score a Suspected Release, record the residential, student, and worker population located on or within ¼-mile of the site. Multiply this number of people by 10; enter the factor score in Column A.
4. **Secondary Target Population** are those people in distance categories not suspected to be subject to exposure from airborne hazardous substances. Determine the number of residents, students, and workers, and enter the summed population in PA Table 8 (page 23) for each distance category. Circle the population value for the distance category and record the value in the far right column of the table. Sum these values and enter the total as the factor score.
5. **Nearest Individual** represents the threat posed to the person most likely to be exposed to hazardous substances released from the site. If you have identified any Primary Population, enter 50. Otherwise, assign the score from the "Nearest Individual" column of PA Table 8 (page 23), for the nearest distance ring in which you have identified a Secondary Population.
6. **Primary Sensitive Environments:** List the sensitive environments (on or within ¼ mile of the site) subject to exposure from a suspected air release of hazardous substances from the site. Assign values for sensitive environment type (from PA Table 5, page 16) and/or wetland acreage (from PA Table 9, page 23). Sum the values and enter the total as the factor score.
7. **Secondary Sensitive Environments:** On PA Table 10 (page 23), list the sensitive environments that are in distance categories within ¼ mile not suspected to be subject to exposure from airborne hazardous substances. Assign a value for each environment (PA Tables 5 and 9). Record the value for each Secondary Sensitive Environment on PA Table 10 (page 23), and multiply by the distance weight for that distance category. Sum the products, and enter the total as the factor score.
8. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

Waste Characteristics (WC)

9. **Waste Characteristics** score is assigned from page 4. However, if any Primary Target has been identified for the air pathway, assign the higher of the score calculated on page 4 or a score of 32.

**Air Pathway Score:** Multiply the scores for LR, T, and WC. Divide the product by 82,500. Round the result to the nearest integer. If the result is greater than 100, assign 100.

AIR PATHWAY SCORESHEET

<i>Pathway Characteristics</i>	
Do you suspect a release (see Air Pathway Criteria List, page 21)?	Yes ___ No <input checked="" type="checkbox"/>
Distance to the nearest individual:	_____ ft

LIKELIHOOD OF RELEASE

	A	B	
	<i>Suspected Release</i>	<i>No Suspected Release</i>	<i>Referenc.</i>
1. SUSPECTED RELEASE: If you suspect a release to air (see page 21), assign a score of 550, and use only column A for this pathway.	(550)		
2. NO SUSPECTED RELEASE: If you do not suspect a release to air, assign a score of 500, and use only column B for this pathway.		(500) 500	
LR =		500	

TARGETS

3. PRIMARY TARGET POPULATION: Determine the number of people subject to exposure from a release of hazardous substances through the air (see Air Pathway Criteria List, page 21). _____ people x 10 =									
4. SECONDARY TARGET POPULATION: Determine the number of people within the 4-mile target distance limit, and assign the total population score from PA Table 8.		25							
5. NEAREST INDIVIDUAL: If you have identified any Primary Targets for the air pathway, assign a score of 50; otherwise, assign the highest Nearest Individual score from PA Table 8.	(50, 20, 7, 2, 1, or 0)	(20, 7, 2, 1, or 0) 20							
6. PRIMARY SENSITIVE ENVIRONMENTS: Sum the sensitive environment values (PA Table 5) and wetland acreage values (PA Table 9) for environments subject to exposure from air hazardous substances (see Air Pathway Criteria List, page 21).									
<table border="1" style="margin: auto; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;"><i>Sensitive Environment Type</i></th> <th style="text-align: left;"><i>Value</i></th> </tr> </thead> <tbody> <tr> <td>_____</td> <td>_____</td> </tr> <tr> <td>_____</td> <td>_____</td> </tr> </tbody> </table>	<i>Sensitive Environment Type</i>	<i>Value</i>	_____	_____	_____	_____			
<i>Sensitive Environment Type</i>	<i>Value</i>

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.

SITE SCORE CALCULATION

	S	S <sup>2</sup>
GROUND WATER PATHWAY SCORE (S <sub>gw</sub> ):	4.36	19.0
SURFACE WATER PATHWAY SCORE (S <sub>sw</sub> ):	2.16	4.67
SOIL EXPOSURE PATHWAY SCORE (S <sub>se</sub> ):	3.80	14.4
AIR PATHWAY SCORE (S <sub>a</sub> ):	5.45	29.7
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{se}^2 + S_a^2}{4}} = 4.12$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?  A. If yes, identify the wells recommended for sampling during the SI.  B. If yes, how many people are served by these threatened wells? _____	<input type="checkbox"/>	<input type="checkbox"/>
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?  A. Drinking water intake B. Fishery C. Sensitive environment: wetland, critical habitat, others D. If yes, identify the targets recommended for sampling during the SI.	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:	<input type="checkbox"/>	<input type="checkbox"/>

## INSTRUCTIONS FOR SCORESHEETS

### Introduction

These scoresheets require you to record information collected during the PA, indicate references used, select values ("scores") for factors, calculate pathway scores and a site score, and conclude with a site recommendation. You are encouraged to write notes on the scoresheets and especially on the Criteria Lists. On pages with a reference column, indicate a number corresponding to attached sources of information or pages containing rationale for hypotheses; attach to the scoresheets a numbered list of these references. Evaluate all four pathways. Complete and submit all Criteria Lists, scoresheets, and tables. Show calculations, as appropriate. Do not enter values or scores in shaded areas of the scoresheets.

### General Information

**Site Description and Operational History:** Provide a brief description of the site and its operating history. State the site name, owner/operator, type of facility and operations, size of property, active or nonactive status, and years of waste generation. Summarize waste treatment, storage, or disposal activities that have or may have occurred at the site; note also if these activities are documented or alleged. Identify probable source types and prior spills. Summarize highlights of previous investigations.

**Probable Contaminants of Concern:** List hazardous substances you think may have been stored, handled, or disposed of at this site, based on your knowledge of site operations. The purpose of identifying probable substances of concern is to consider the mobility of wastes to hypothesize whether a release has occurred. Identify the sources to which the substances may be related. Summarize any analytical data that may exist concerning contamination detected onsite or impacting targets, as a result of previous investigations performed on the site.

# GROUND WATER PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to identify suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

# DRAFT

NOV 06 1990

## GROUND WATER PATHWAY

### Pathway Characteristics

Answer the questions at the top of the page. Refer to the Ground Water Pathway Criteria List (page 7) to hypothesize whether you suspect that hazardous substances associated with the site have been released to ground water (GW). Record the depth to the aquifer (in feet): the difference between the deepest depth of waste deposited and the shallowest depth of the top of the aquifer at or as near as possible to the site. Note whether the site is in karst terrain (characterized by abrupt ridges, sink holes, caverns, springs, disappearing streams). State the distance (in feet) from any source to the nearest well used for drinking water.

### Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Ground Water Pathway Criteria List (page 7). Remember to use only Column A for this pathway if you score a suspected release to ground water, and do not evaluate factor 2.
2. **No Suspected Release:** If you do not suspect a release, determine the GW LR score based on depth to aquifer or whether the site is in an area of karst terrain. If you do not suspect a release to ground water, remember to use only Column B to score this pathway.

### Targets (T)

Evaluates the threat to populations who obtain their drinking water from GW supplies. To apportion populations served by blended drinking-water supply systems, determine the percentage of population served by each well within the 4-mile target distance limit based on its production.

3. **Primary Target Population:** Populations served by any drinking-water wells that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Ground Water Pathway Criteria List (page 7) to make this determination. In the space provided, enter the population served by any wells you suspect have been exposed to hazardous substances from the site. If only the number of residences is known, use the average county residents per household (rounded to the next integer) to determine population served. Multiply the population by 10 to determine the Primary Target Population score. Note that if you do not suspect a release, there is no Primary Target Population.
4. **Secondary Target Population:** Populations served by any drinking-water wells within four miles of the site that you do not suspect have been exposed to hazardous substances should be evaluated on PA Table 2a or 2b (used for wells drawing from karst aquifers) (page 9). Circle the assigned value for the population in each distance ring and enter it in the column on the far right side of the table. Sum the far right column and enter the total as the Secondary Target Population factor score.
5. **Nearest Well** represents the threat posed to the well that is most likely to be exposed to hazardous substances. If you have identified a Primary Target Population, enter 50. Otherwise, obtain the Nearest Well value from PA Table 2a or 2b for the closest distance category with a drinking-water well population.
6. **Wellhead Protection Area (WHPA):** WHPAs are special areas designated by States for protection under Section 1428 of the Safe Drinking Water Act. Local/State and EPA Regional water officials can provide information regarding the location of WHPAs.
7. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release). Note that if there are no drinking-water wells within the target distance limit, the total targets score for either Column A or Column B will be 5 (automatically assigned for resources).

### Waste Characteristics (WC)

8. **Waste Characteristics** score is assigned from page 4. However, if any Primary Target has been identified for GW, assign the higher of the score calculated on page 4 or a score of 32.

**Ground Water Pathway Score:** Multiply the scores for LR, T, and WC. Divide the product by 82,500. Round the result to the nearest integer. If the result is greater than 100, assign 100.

## SURFACE WATER PATHWAY

### Pathway Characteristics

The surface water pathway includes three threats: Drinking Water Threat, Human Food Chain Threat, and Environmental Threat. Answer the questions at the top of the page. Refer to the Surface Water Pathway Criteria List (page 11) to hypothesize whether you suspect hazardous substances have been released to surface water. Enter the distance to surface water (the shortest overland drainage distance from a source to a surface water body). State the floodplain in which the site is located (e.g., 100-yr, 200-yr). If the site is located in more than one floodplain, use the most frequent flooding event. Identify surface water uses for the 15-mile surface water migration path.

### Likelihood of Release (LR)

- 1. Suspected Release:** Hypothesize based on professional judgment guided by the Surface Water Pathway Criteria List (page 11). Remember to use only Column A for this pathway if you score a suspected release to surface water, and do not evaluate factor 2.
- 2. No Suspected Release:** Determine score based on the shortest overland drainage distance from a source to a surface water body. If distance to surface water is greater than 2,500 feet, determine this score based on flood frequency. Remember to use only Column B to score this pathway if you do not suspect that hazardous substances have been released.

### Drinking Water Threat Targets (T)

- 3. List all drinking-water intakes on downstream surface water bodies within the 15-mile target distance limit.** Provide the intake name, the type of water body on which the intake is located, the flow of the water body, and the number of people served by the intake (apportion the population if part of a blended system).
- 4. Primary Target Population:** Evaluate any populations served by drinking-water intakes that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Surface Water Pathway Criteria List (page 11) to make this determination. In the space provided, enter the population served by all intakes you suspect have been exposed to hazardous substances, and multiply by 10 to derive the Primary Target Population score. Remember, if you do not suspect a release, there is no Primary Target Population.
- 5. Secondary Target Population:** On PA Table 3 (page 13), evaluate any populations served by drinking-water intakes that you do not suspect have been exposed to hazardous substances. Enter the population served by intakes for each flow category. Circle the assigned population value and enter it in the far right column. Sum the population values and enter the total as the Secondary Target Population score.

Gauging station data for most surface water bodies should be available from USGS or other sources. In the absence of gauging station data, see PA Table 4 (page 13) for a listing of surface water body types and associated flow categories. The flow for lakes is determined by the sum of flows of streams entering or leaving the lake. Note that the flow category "mixing zone of quiet flowing rivers" can be used for rivers with flows of at least 10 cfs, but only for intakes within 3 miles of the probable point of entry.

- 6. Nearest Intake score** represents the threat posed to the drinking-water intake that is most likely to be exposed to hazardous substances. If you have identified a Primary Target Population, assign a score of 50. Otherwise assign the score determined from PA Table 3 (page 13) for the lowest-flowing water body on which there is an intake.
- 7. Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

**DRINKING WATER THREAT TARGETS**

- Determine the water body types, flows (if applicable), and number of people served by all drinking-water intakes within the 15-mile target distance limit. If there are no drinking-water intakes within the target distance limit, assign a total Targets score of 5 at the bottom of this page (Resources only) and proceed to page 14.

Intake Name	Water Body Type	Flow	People Served
City of Sandusky	Great Lake	N/A cfs	47,000
City of Huron	Great Lake	N/A cfs	7,000
		cfs	

- PRIMARY TARGET POPULATION:** If you suspect any drinking-water intake listed above has been exposed to hazardous substances from the site (see Surface Water Pathway Criteria List, page 11), list the intake name(s) and calculate the factor score based on the number of people served.

\_\_\_\_\_ people x 10 = 0

- SECONDARY TARGET POPULATION:** Determine the Secondary Target Population score from PA Table 3 based on the populations using drinking-water from intakes that you do NOT suspect have been exposed to hazardous substances from the site.

Are any intakes part of a blended system? Yes  No  X  
If yes, attach a page to show apportionment calculations.

- NEAREST INTAKE:** If you have identified any Primary Targets for the drinking water threat (Factor 4), assign a score of 50; otherwise, assign the Nearest Intake score from PA Table 3. If no drinking-water intake exists within the 15-mile target distance limit, assign a score of zero.

- RESOURCES:** A score of 5 is assigned.

DRAFT

NOV 06 1990

## SURFACE WATER PATHWAY ENVIRONMENTAL THREAT

### Likelihood of Release (LR)

LR is the same for all threats in the Surface Water Pathway. Enter the LR score determined on page 12.

### Environmental Threat Targets (T)

11. There are many different types of Environmental Targets. Refer to PA Table 5 (page 16) for a listing of sensitive environments that are evaluated for the Surface Water Pathway Environmental Threat. In the space provided, identify all sensitive environments located within the 15-mile target distance limit. Indicate the surface water body type and flow at each sensitive environment. Gauging station data for most surface water bodies should be available from USGS or other sources. In the absence of gauging station data, see PA Table 4 (page 13) for a listing of surface water body types and associated flow categories. The flow for lakes is determined by the sum of flows of streams entering or leaving the lake. Note that, if there are no sensitive environments within the 15-mile target distance limit, the Environmental Targets score is zero; and you should proceed to the Waste Characteristics evaluation.

12. **Primary Sensitive Environments** are surface water sensitive environments within the 15-mile target distance limit that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Surface Water Pathway Criteria List (page 11) to make this determination. If you identify any Primary Sensitive Environments, enter 300 as the Primary Sensitive Environments factor score, and do not evaluate Secondary Sensitive Environments. Note that if you do not suspect a release, there are no Primary Sensitive Environments.

13. **Secondary Sensitive Environments** are surface water sensitive environments that you do not suspect have been exposed to hazardous substances. If you have identified Secondary Sensitive Environments, evaluate them based on flow by the following process: if there are any Secondary Sensitive Environments on surface water bodies with flows of 100 cfs or less, list them in the table. Use PA Table 4 (page 13) to determine the appropriate dilution weight(s).

Use PA Tables 5 and 6 (page 16) to determine the appropriate value for sensitive environment type. When measuring length of wetlands that are located on both sides of a surface water body, sum the frontage areas. For sensitive environments that fall into more than one of the categories listed in PA Table 5, sum the values for each type to determine the environment value. For example, a wetland of 1.5 miles total length (value of 50) that is also a critical habitat for a Federally endangered species (value of 100) would receive an environment value of 150.

For each sensitive environment, multiply the dilution weight by the environment type/length of wetlands value and record the product in the far right column. Sum the values in the far right column and enter the total as the Secondary Sensitive Environments score. Do not evaluate any other Secondary Sensitive Environments. However, if all Secondary Sensitive Environments are on surface water bodies with flows of greater than 100 cfs, assign a Secondary Sensitive Environments score of 10.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

## SURFACE WATER PATHWAY WASTE CHARACTERISTICS, THREAT, AND PATHWAY SCORE

### Waste Characteristics (WC)

14. Waste Characteristics score is assigned from page 4. However, if any Primary Target has been identified for any surface water threat, assign the higher of the score calculated on page 4 or a score of 32.

### Surface Water Pathway Threat Scores

Fill in the matrix with the appropriate scores from the previous pages. To calculate the score for each threat: multiply the scores for LR, T and WC, divide the product by 82,500, and round the result to the nearest integer. The Drinking Water Threat and Human Food Chain Threat are subject to a maximum of 100. The Environmental Threat is subject to a maximum of 60. Enter the rounded threat scores into the right side of the table.

### Surface Water Pathway Score

Sum the individual threat scores to determine the Surface Water Pathway Score. If the sum is greater than 100, assign 100.

URAFI NOV 06 1990  
**SOIL EXPOSURE PATHWAY CRITERIA LIST**

Site Name:  
 Date:

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident population. This chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

SOIL EXPOSURE PATHWAY				
SUSPECTED CONTAMINATION	RESIDENT POPULATION			
	Y e s	N o	U n k n o w n	
<i>Surficial contamination is assumed.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there residences, schools, or day care facilities on or within 200 feet of areas of suspected contamination?
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are residences, schools, or day care facilities located on adjacent land previously owned or leased by the site owner/operator?
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there an overland migration route that might spread hazardous substances near residences, schools, or day care facilities?
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there any reports of adverse health effects from onsite or adjacent residents or students exclusive of apparent drinking water or air contamination problems?
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Does any offsite property warrant sampling?
	<input type="checkbox"/>	<input type="checkbox"/>		Other criteria? _____
	<input type="checkbox"/>	<input type="checkbox"/>		<b>RESIDENT POPULATION IDENTIFIED?</b>

Summarize the rationale for resident population (attach an additional page if necessary):

DRAFT

NOV 08 1990

SOIL EXPOSURE PATHWAY SCORESHEET

*Pathway Characteristics*

Do any people live on or within 200 ft of areas of suspected contamination? Yes \_\_\_ No \_\_\_

Do any people attend school or day care on or within 200 ft of areas of suspected contamination? Yes \_\_\_ No \_\_\_

Is the facility active? Yes \_\_\_ No \_\_\_ If yes, estimate the number of workers: 150

LIKELIHOOD OF EXPOSURE

	A <i>Suspected Contamination</i>	B <i>No Suspected Contamination</i>	Referenc
1. SUSPECTED CONTAMINATION: Surficial contamination is assumed. A score of 550 is assigned. LE =	(550) 550		

RESIDENT POPULATION THREAT TARGETS

2. RESIDENT POPULATION: Determine the number of people occupying residences or attending school or day care on or within 200 feet of areas of suspected contamination (see Soil Exposure Pathway Criteria List, page 18). <u>0</u> people x 10 =	(50 or 0) 0												
3. RESIDENT INDIVIDUAL: If you have identified any Resident Population (Factor 2), assign a score of 50; otherwise, assign a score of 0.	(15, 10, 5, or 0) 0												
4. WORKERS: Assign a score from the following table based on the total number of workers at the facility and nearby facilities with suspected contamination:													
<table border="1"> <thead> <tr> <th><i>Number of Workers</i></th> <th><i>Score</i></th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> </tr> <tr> <td>1 to 100</td> <td>5</td> </tr> <tr> <td>101 to 1,000</td> <td>10</td> </tr> <tr> <td>&gt; 1,000</td> <td>15</td> </tr> </tbody> </table>	<i>Number of Workers</i>	<i>Score</i>	0	0	1 to 100	5	101 to 1,000	10	> 1,000	15	(15, 10, 5, or 0) 10		
<i>Number of Workers</i>	<i>Score</i>												
0	0												
1 to 100	5												
101 to 1,000	10												
> 1,000	15												
5. TERRESTRIAL SENSITIVE ENVIRONMENTS: Assign a value from PA Table 7 for each terrestrial sensitive environment that is located on an area of suspected contamination:													
<table border="1"> <thead> <tr> <th><i>Terrestrial Sensitive Environment Type</i></th> <th><i>Value</i></th> </tr> </thead> <tbody> <tr> <td>_____</td> <td>_____</td> </tr> <tr> <td>_____</td> <td>_____</td> </tr> </tbody> </table>	<i>Terrestrial Sensitive Environment Type</i>	<i>Value</i>	_____	_____	_____	_____	(15, 10, 5, or 0) 0						
<i>Terrestrial Sensitive Environment Type</i>	<i>Value</i>												
_____	_____												
_____	_____												
6. RESOURCES: A score of 5 is assigned. Sum =	(5) 5												
T =	15												

WASTE CHARACTERISTICS

7. Assign the waste characteristics score calculated on page 4. WC =	(100, 32, or 18) 18		
--	------------------------	--	--

RESIDENT POPULATION THREAT SCORE:

$$\frac{LE \times T \times WC}{82,500}$$

(subject to a maximum of 100) 1.8
--------------------------------------

NEARBY POPULATION THREAT SCORE:

Assign a score of 2

2
---

SOIL EXPOSURE PATHWAY SCORE:

Resident Population Threat + Nearby Population Threat

(subject to a maximum of 100) 3.8
--------------------------------------

SOIL EXPOSURE PATHWAY

Pathway Characteristics

Answer the questions at the top of the page. Identify people who are most likely to be regularly exposed to contamination at the site because they work at the facility or reside or attend school or day care on or within 200 feet of an area of suspected contamination. If the site is active, estimate the number of full or part-time workers at this facility. Note that evaluation of targets is based on current site conditions.

Likelihood of Exposure (LE)

1. **Suspected Contamination:** The PA always assumes that surficial contamination exists. Do not override this assumption. Surficial contamination often exists even if wastes have been "removed" or are believed to be buried below the surface. A 550 is automatically assigned for this factor; only Column A can be scored for this pathway.

Resident Population Threat Targets (T)

2. **Resident Population** corresponds to "primary targets" for the migration pathways. Determine if there are people living or attending school or day care on or within 200 feet of areas of suspected contamination. Use professional judgment guided by the Soil Exposure Pathway Criteria List (page 18) to make this determination. Record the number of people identified as Resident Population. Multiply this population by 10 to determine the Resident Population factor score.

3. **Resident Individual:** If you have identified a Resident Population, assign a score of 50. Otherwise, assign a score of 0.

4. **Workers:** Estimate the number of full and part-time workers regularly present at this facility and other facilities where contamination is suspected. Assign a score for the workers factor from the table.

5. **Terrestrial Sensitive Environments:** In the table provided, list each Terrestrial Sensitive Environment located on areas of suspected contamination. Use PA Table 7 (page 20) to assign a value for each sensitive environment. Sum the values of all the terrestrial sensitive environments and assign the total as the factor score.

6. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A.

Waste Characteristics (WC)

7. Enter the WC score determined on page 4. There is no exception for this pathway.

**Soil Exposure Pathway Score:** Calculate the Resident Population Threat Score by multiplying the scores for LE, T, and WC, and dividing the product by 82,500. Round the threat score to the nearest integer. If the result is greater than 100, assign 100. The Nearby Population Threat Score is always 2 for the PA; do not override this score. Add these 2 points to the calculated Resident Population Threat Score to determine the Soil Exposure Pathway Score, subject to a maximum of 100.

DRAFT

Site Name:  
Date:

NOV 06 1990

PA TABLE 7: SOIL EXPOSURE PATHWAY  
TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned Value</i>
Terrestrial critical habitat for Federally designated endangered or threatened species	100
National Park	
Designated Federal Wilderness Area	
National Monument	
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species	75
National Preserve (terrestrial)	
National or State terrestrial Wildlife Refuge	
Federal land designated for protection of natural ecosystems	
Administratively proposed Federal Wilderness Area	
Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	
Terrestrial habitat used by State designated endangered or threatened species	50
Terrestrial habitat used by species under review for Federally designated endangered or threatened status	
State lands designated for wildlife or game management	25
State designated Natural Areas	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

# AIR PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. You will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from a site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY			
SUSPECTED RELEASE			PRIMARY TARGETS
Y E S	N O	U N K N O W N	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Have odors been reported?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has a release of hazardous substances to the air been directly observed?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there any circumstantial evidence of an air release?
<input type="checkbox"/>	<input type="checkbox"/>		Other criteria? _____
<input type="checkbox"/>	<input type="checkbox"/>		<b>SUSPECTED RELEASE?</b>

*If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.*

Summarize the rationale for suspected release (attach an additional page if necessary):

Pathway Characteristics

Answer the questions at the top of the page. Refer to the Air Pathway Criteria List (page 21) to hypothesize whether you suspect hazardous substances have been released from the site to the air. Due to dispersion, releases to air are not as persistent as releases to water migration pathways and are much more difficult to detect. Develop hypotheses concerning the release of hazardous substances to air based on "real time" considerations. Record the distance (in feet) from any source to the nearest regularly occupied building.

Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Air Pathway Criteria List (page 21). Remember to use only Column A for this pathway if you score a Suspected Release, and proceed to the target evaluation section.
2. **No Suspected Release:** If you do not score a Suspected Release, enter 500. Remember to use only Column B to score this pathway if you do not suspect hazardous substances are being released.

Targets (T)

3. **Primary Target Population** are those people subject to exposure from a suspected air release of hazardous substances from the site. Use professional judgment, guided by the Air Pathway Criteria List (page 21), to make this determination. Note that if you do not suspect a release, there are no primary population targets. If you score a Suspected Release, record the residential, student, and worker population located on or within ¼-mile of the site. Multiply this number of people by 10; enter the factor score in Column A.
4. **Secondary Target Population** are those people in distance categories not suspected to be subject to exposure from airborne hazardous substances. Determine the number of residents, students, and workers, and enter the summed population in PA Table 8 (page 23) for each distance category. Circle the population value for the distance category and record the value in the far right column of the table. Sum these values and enter the total as the factor score.
5. **Nearest Individual** represents the threat posed to the person most likely to be exposed to hazardous substances released from the site. If you have identified any Primary Population, enter 50. Otherwise, assign the score from the "Nearest Individual" column of PA Table 8 (page 23), for the nearest distance ring in which you have identified a Secondary Population.
6. **Primary Sensitive Environments:** List the sensitive environments (on or within ¼ mile of the site) subject to exposure from a suspected air release of hazardous substances from the site. Assign values for sensitive environment type (from PA Table 5, page 16) and/or wetland acreage (from PA Table 9, page 23). Sum the values and enter the total as the factor score.
7. **Secondary Sensitive Environments:** On PA Table 10 (page 23), list the sensitive environments that are in distance categories within ½ mile not suspected to be subject to exposure from airborne hazardous substances. Assign a value for each environment (PA Tables 5 and 9). Record the value for each Secondary Sensitive Environment on PA Table 10 (page 23), and multiply by the distance weight for that distance category. Sum the products, and enter the total as the factor score.
8. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

Waste Characteristics (WC)

9. **Waste Characteristics** score is assigned from page 4. However, if any Primary Target has been identified for the air pathway, assign the higher of the score calculated on page 4 or a score of 32.

**Air Pathway Score:** Multiply the scores for LR, T, and WC. Divide the product by 82,500. Round the result to the nearest integer. If the result is greater than 100, assign 100.

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

## GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	_____ ft
Distance to the nearest drinking-water well:	_____ ft

### LIKELIHOOD OF RELEASE

	A Suspected Release <small>(550)</small>	B No Suspected Release <small>(500 or 340)</small>	Refere.
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	550		
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.			
LR =	550		

### TARGETS

3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). <u>0</u> people x 10 =	0		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.	15		
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	20		
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	0		
7. RESOURCES: A score of 5 is assigned.	5	5	
T =	40		

### WASTE CHARACTERISTICS

8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	0		
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	32		
WC =	32		

GROUND WATER PATHWAY SCORE:

$$\frac{LR \times T \times WC}{82,500}$$

PA TABLE 7: SOIL EXPOSURE PATHWAY  
TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned Value</i>
Terrestrial critical habitat for Federally designated endangered or threatened species National Park Designated Federal Wilderness Area National Monument	100
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species National Preserve (terrestrial) National or State terrestrial Wildlife Refuge Federal land designated for protection of natural ecosystems Administratively proposed Federal Wilderness Area Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	75
Terrestrial habitat used by State designated endangered or threatened species Terrestrial habitat used by species under review for Federally designated endangered or threatened status	50
State lands designated for wildlife or game management State designated Natural Areas	(25)
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

# AIR PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY			
SUSPECTED RELEASE			PRIMARY TARGETS
Y E S	N O	D O U B T	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Have odors been reported?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has a release of hazardous substances to the air been directly observed?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there any circumstantial evidence of an air release?
<input type="checkbox"/>	<input type="checkbox"/>	Other criteria? _____	
<input type="checkbox"/>	<input type="checkbox"/>	<b>SUSPECTED RELEASE?</b>	

*If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.*

Summarize the rationale for suspected release (attach an additional page if necessary):

SOIL EXPOSURE PATHWAY SCORE (S <sub>se</sub> ):	5.20	27.0
AIR PATHWAY SCORE (S <sub>a</sub> ):	9.70	94.11
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{se}^2 + S_a^2}{4}} = 7.22$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?	<input type="checkbox"/>	<input type="checkbox"/>
A. If yes, identify the wells recommended for sampling during the SI.		
B. If yes, how many people are served by these threatened wells? _____		
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?		
A. Drinking water intake	<input type="checkbox"/>	<input type="checkbox"/>
B. Fishery	<input type="checkbox"/>	<input type="checkbox"/>
C. Sensitive environment: wetland, critical habitat, others	<input type="checkbox"/>	<input type="checkbox"/>
D. If yes, identify the targets recommended for sampling during the SI.		
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:	<input type="checkbox"/>	<input type="checkbox"/>

## GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	_____ ft
Distance to the nearest drinking-water well:	_____ ft

LIKELIHOOD OF RELEASE	A	B	Refers
	Suspected Release	No Suspected Release	
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	(550) 550		_____
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.		(500 or 340)	_____
LR =	550		_____

TARGETS	A	B	
3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). _____ people x 10 =	0		_____
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2.  Are any wells part of a blended system? Yes ___ No <input checked="" type="checkbox"/> If yes, attach a page to show apportionment calculations.	15		_____
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	20		_____
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	0		_____
7. RESOURCES: A score of 5 is assigned.	5	5	_____
T =	40		_____

WASTE CHARACTERISTICS	A	B	
8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	18		_____
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	18		_____
WC =	18		_____

**SURFACE WATER PATHWAY  
MIGRATION ROUTE SKETCH**

**Provide a Sketch of the Surface Water Migration Route:**

(include runoff route, probable point of entry, 15-mile target distance limit, intakes, fisheries, and sensitive environments)

See report sections 3.1. and 3.2.

**SURFACE WATER PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of some conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the responses for the target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

**SOIL EXPOSURE PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident populations. The chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

SOIL EXPOSURE PATHWAY				
SUSPECTED CONTAMINATION	RESIDENT POPULATION

# AIR PATHWAY CRITERIA LIST

Site Name:  
Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY			
SUSPECTED RELEASE			PRIMARY TARGETS
Y •	N •	UNKNOWN •	<p><i>If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.</i></p>
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> Have odors been reported?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> Has a release of hazardous substances to the air been directly observed?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> Is there any circumstantial evidence of an air release?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> Other criteria? _____	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/> SUSPECTED RELEASE?	

Summarize the rationale for suspected release (attach an additional page if necessary):

# GROUND WATER PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	_____ ft
Distance to the nearest drinking-water well:	_____ ft

LIKELIHOOD OF RELEASE

	A Suspected Release	B No Suspected Release	Referen
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	(550) 550		
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.		(500 or 340)	
LR =	550		

TARGETS

3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). 0 people x 10 =	0		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.	15		
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	20		
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	0		
7. RESOURCES: A score of 5 is assigned.	5	5	
T =	40		

WASTE CHARACTERISTICS

8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	(100 or 32)		
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	(100, 32, or 18)	(100, 32, or 18)	
WC =	32

## SURFACE WATER PATHWAY

### Pathway Characteristics

The surface water pathway includes three threats: Drinking Water Threat, Human Food Chain Threat, and Environmental Threat. Answer the questions at the top of the page. Refer to the Surface Water Pathway Criteria List (page 11) to hypothesize whether you suspect hazardous substances have been released to surface water. Enter the distance to surface water (the shortest overland drainage distance from a source to a surface water body). State the floodplain in which the site is located (e.g., 100-yr, 200-yr). If the site is located in more than one floodplain, use the most frequent flooding event. Identify surface water uses for the 15-mile surface water migration path.

### Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Surface Water Pathway Criteria List (page 11). Remember to use only Column A for this pathway if you score a suspected release to surface water, and do not evaluate factor 2.
2. **No Suspected Release:** Determine score based on the shortest overland drainage distance from a source to a surface water body. If distance to surface water is greater than 2,500 feet, determine this score based on flood frequency. Remember to use only Column B to score this pathway if you do not suspect that hazardous substances have been released.

### Drinking Water Threat Targets (T)

3. List all drinking-water intakes on downstream surface water bodies within the 15-mile target distance limit. Provide the intake name, the type of water body on which the intake is located, the flow of the water body, and the number of people served by the intake (apportion the population if part of a blended system).
4. **Primary Target Population:** Evaluate any populations served by drinking-water intakes that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Surface Water Pathway Criteria List (page 11) to make this determination. In the space provided, enter the population served by all intakes you suspect have been exposed to hazardous substances, and multiply by 10 to derive the Primary Target Population score. Remember, if you do not suspect a release, there is no Primary Target Population.
5. **Secondary Target Population:** On PA Table 3 (page 13), evaluate any populations served by drinking-water intakes that you do not suspect have been exposed to hazardous substances. Enter the population served by intakes for each flow category. Circle the assigned population value and enter it in the far right column. Sum the population values and enter the total as the Secondary Target Population score.

Gauging station data for most surface water bodies should be available from USGS or other sources. In the absence of gauging station data, see PA Table 4 (page 13) for a listing of surface water body types and associated flow categories. The flow for lakes is determined by the sum of flows of streams entering or leaving the lake. Note that the flow category "mixing zone of quiet flowing rivers" can be used for rivers with flows of at least 10 cfs, but only for intakes within 3 miles of the probable point of entry.

6. **Nearest Intake score** represents the threat posed to the drinking-water intake that is most likely to be exposed to hazardous substances. If you have identified a Primary Target Population, assign a score of 50. Otherwise assign the score determined from PA Table 3 (page 13) for the lowest-flowing water body on which there is an intake.
7. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

**DRINKING WATER THREAT TARGETS**

- Determine the water body types, flows (if applicable), and number of people served by all drinking-water intakes within the 15-mile target distance limit. If there are no drinking-water intakes within the target distance limit, assign a total Targets score of 5 at the bottom of this page (Resources only) and proceed to page 14.

Intake Name	Water Body Type	Flow	People Served
City of Sandusky	Great Lake	N/A cfs	47,000
City of Huron	Great Lake	N/A cfs	7,000
		cfs	

- PRIMARY TARGET POPULATION:** If you suspect any drinking-water intake listed above has been exposed to hazardous substances from the site (see Surface Water Pathway Criteria List, page 11), list the intake name(s) and calculate the factor score based on the number of people served.

0 people x 10 = 0

- SECONDARY TARGET POPULATION:** Determine the Secondary Target Population score from PA Table 3 based on the populations using drinking-water from intakes that you do NOT suspect have been exposed to hazardous substances from the site.

Are any intakes part of a blended system? Yes \_\_\_ No X  
If yes, attach a page to show apportionment calculations.

- NEAREST INTAKE:** If you have identified any Primary Targets for the drinking water threat (Factor 4), assign a score of 50; otherwise, assign the Nearest Intake score from PA Table 3. If no drinking-water intake exists within the 15-mile target distance limit, assign a score of zero.

- RESOURCES:** A score of 5 is assigned.

11. Determine the water body types and flows (if applicable) for all surface water sensitive environments within the 15-mile target distance limit (see PA Tables 4 and 5). If there are no sensitive environments within the 15-mile target distance limit, assign a Targets score of 0 at the bottom of this page, and proceed to page 17.

<i>Environment Name</i>	<i>Water Body Type</i>	<i>Flow</i>
_____	_____	_____ cfs

12. PRIMARY SENSITIVE ENVIRONMENTS: If you suspect any sensitive environment listed above has been exposed to hazardous substances from the site (see Surface Water Criteria List, page 11), assign a score of 300 and do not evaluate Factor 13. List the Primary Sensitive Environments:

\_\_\_\_\_  
\_\_\_\_\_

13. SECONDARY SENSITIVE ENVIRONMENTS:

A. For Secondary Sensitive Environments on surface water bodies with flows of 100 cfs or less, assign scores as follows, and do not evaluate part B of this factor:

<i>Flow</i>	<i>Dilution Weight (PA Table 4)</i>	<i>Environment Type and Value (PA Tables 5 and 6)</i>	<i>Total</i>
cfs	x		=

Sum =

B. If NO Secondary Sensitive Environments are located on surface water bodies with flows of 100 cfs or less, assign a score of 10.

(300 = 0)

NOV 06 1990

## **SURFACE WATER PATHWAY WASTE CHARACTERISTICS, THREAT, AND PATHWAY SCORE**

### **Waste Characteristics (WC)**

14. Waste Characteristics score is assigned from page 4. However, if any Primary Target has been identified for any surface water threat, assign the higher of the score calculated on page 4 or a score of 32.

### **Surface Water Pathway Threat Scores**

Fill in the matrix with the appropriate scores from the previous pages. To calculate the score for each threat: multiply the scores for LR, T and WC, divide the product by 82,500, and round the result to the nearest integer. The Drinking Water Threat and Human Food Chain Threat are subject to a maximum of 100. The Environmental Threat is subject to a maximum of 60. Enter the rounded threat scores into the right side of the table.

### **Surface Water Pathway Score**

Sum the individual threat scores to determine the Surface Water Pathway Score. If the sum is greater than 100, assign 100.

**SOIL EXPOSURE PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident populations. This chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

SOIL EXPOSURE PATHWAY SCORESHEET

Pathway Characteristics	
Do any people live on or within 200 ft of areas of suspected contamination?	Yes ___ No ___
Do any people attend school or day care on or within 200 ft of areas of suspected contamination?	Yes ___ No ___
Is the facility active? Yes ___ No ___	If yes, estimate the number of workers: <u>150</u>

LIKELIHOOD OF EXPOSURE

	A	B	Reference
	Suspected Contamination	No Suspected Contamination	
1. SUSPECTED CONTAMINATION: Surficial contamination is assumed. A score of 550 is assigned. LE =	(550) 550		

RESIDENT POPULATION THREAT TARGETS

2. RESIDENT POPULATION: Determine the number of people occupying residences or attending school or day care on or within 200 feet of areas of suspected contamination (see Soil Exposure Pathway Criteria List, page 18). <u>0</u> people x 10 =	0												
3. RESIDENT INDIVIDUAL: If you have identified any Resident Population (Factor 2), assign a score of 50; otherwise, assign a score of 0.	0												
4. WORKERS: Assign a score from the following table based on the total number of workers at the facility and nearby facilities with suspected contamination:													
<table border="1"> <thead> <tr> <th>Number of Workers</th> <th>Score</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> </tr> <tr> <td>1 to 100</td> <td>5</td> </tr> <tr> <td>101 to 1,000</td> <td>10</td> </tr> <tr> <td>&gt; 1,000</td> <td>15</td> </tr> </tbody> </table>	Number of Workers	Score	0	0	1 to 100	5	101 to 1,000	10	> 1,000	15	10		
Number of Workers	Score												
0	0												
1 to 100	5												
101 to 1,000	10												
> 1,000	15												
5. TERRESTRIAL SENSITIVE ENVIRONMENTS: Assign a value from PA Table 7 for each terrestrial sensitive environment that is located on an area of suspected contamination:													
<table border="1"> <thead> <tr> <th>Terrestrial Sensitive Environment Type</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>_____</td> <td>_____</td> </tr> <tr> <td>_____</td> <td>_____</td> </tr> </tbody> </table>	Terrestrial Sensitive Environment Type	Value	_____	_____	_____	_____	0						
Terrestrial Sensitive Environment Type	Value												
_____	_____												
_____	_____												
6. RESOURCES: A score of 5 is assigned.	5												
Sum =	15												
T =	15												

WASTE CHARACTERISTICS

7. Assign the waste characteristics score calculated on page 4. WC =	(32, 32, or 10) 32		
--	-----------------------	--	--

RESIDENT POPULATION THREAT SCORE:

$$\frac{LE \times T \times WC}{82,500}$$

(subject to a maximum of 100) 3.2
--------------------------------------

NEARBY POPULATION THREAT SCORE:

Assign a score of 2

2
---

SOIL EXPOSURE PATHWAY SCORE:

Resident Population Threat + Nearby Population Threat

(subject to a maximum of 100) 5.2
--------------------------------------

SOIL EXPOSURE PATHWAY

Pathway Characteristics

Answer the questions at the top of the page. Identify people who are most likely to be regularly exposed to contamination at the site because they work at the facility or reside or attend school or day care on or within 200 feet of an area of suspected contamination. If the site is active, estimate the number of full or part-time workers at this facility. Note that evaluation of targets is based on current site conditions.

Likelihood of Exposure (LE)

1. **Suspected Contamination:** The PA always assumes that surficial contamination exists. Do not override this assumption. Surficial contamination often exists even if wastes have been "removed" or are believed to be buried below the surface. A 550 is automatically assigned for this factor; only Column A can be scored for this pathway.

Resident Population Threat Targets (T)

2. **Resident Population** corresponds to "primary targets" for the migration pathways. Determine if there are people living or attending school or day care on or within 200 feet of areas of suspected contamination. Use professional judgment guided by the Soil Exposure Pathway Criteria List (page 18) to make this determination. Record the number of people identified as Resident Population. Multiply this population by 10 to determine the Resident Population factor score.

3. **Resident Individual:** If you have identified a Resident Population, assign a score of 50. Otherwise, assign a score of 0.

4. **Workers:** Estimate the number of full and part-time workers regularly present at this facility and other facilities where contamination is suspected. Assign a score for the workers factor from the table.

5. **Terrestrial Sensitive Environments:** In the table provided, list each Terrestrial Sensitive Environment located on areas of suspected contamination. Use PA Table 7 (page 20) to assign a value for each sensitive environment. Sum the values of all the terrestrial sensitive environments and assign the total as the factor score.

6. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A.

Waste Characteristics (WC)

7. Enter the WC score determined on page 4. There is no exception for this pathway.

**Soil Exposure Pathway Score:** Calculate the Resident Population Threat Score by multiplying the scores for LE, T, and WC, and dividing the product by 82,500. Round the threat score to the nearest integer. If the result is greater than 100, assign 100. The Nearby Population Threat Score is always 2 for the PA; do not override this score. Add these 2 points to the calculated Resident Population Threat Score to determine the Soil Exposure Pathway Score, subject to a maximum of 100.

# AIR PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY			
SUSPECTED RELEASE			PRIMARY TARGETS
Y • • •	N • • •	U • • • • • •	<p style="text-align: center;"><i>If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.</i></p>
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Have odors been reported?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has a release of hazardous substances to the air been directly observed?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there any circumstantial evidence of an air release?
<input type="checkbox"/>	<input type="checkbox"/>	Other criteria? _____	
<input type="checkbox"/>	<input type="checkbox"/>	<b>SUSPECTED RELEASE?</b>	

Summarize the rationale for suspected release (attach an additional page if necessary):

**Pathway Characteristics**

Answer the questions at the top of the page. Refer to the Air Pathway Criteria List (page 21) to hypothesize whether you suspect hazardous substances have been released from the site to the air. Due to dispersion, releases to air are not as persistent as releases to water migration pathways and are much more difficult to detect. Develop hypotheses concerning the release of hazardous substances to air based on "real time" considerations. Record the distance (in feet) from any source to the nearest regularly occupied building.

**Likelihood of Release (LR)**

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Air Pathway Criteria List (page 21). Remember to use only Column A for this pathway if you score a Suspected Release, and proceed to the target evaluation section.
2. **No Suspected Release:** If you do not score a Suspected Release, enter 500. Remember to use only Column B to score this pathway if you do not suspect hazardous substances are being released.

**Targets (T)**

3. **Primary Target Population** are those people subject to exposure from a suspected air release of hazardous substances from the site. Use professional judgment, guided by the Air Pathway Criteria List (page 21), to make this determination. Note that if you do not suspect a release, there are no primary population targets. If you score a Suspected Release, record the residential, student, and worker population located on or within ¼-mile of the site. Multiply this number of people by 10; enter the factor score in Column A.
4. **Secondary Target Population** are those people in distance categories not suspected to be subject to exposure from airborne hazardous substances. Determine the number of residents, students, and workers, and enter the summed population in PA Table 8 (page 23) for each distance category. Circle the population value for the distance category and record the value in the far right column of the table. Sum these values and enter the total as the factor score.
5. **Nearest Individual** represents the threat posed to the person most likely to be exposed to hazardous substances released from the site. If you have identified any Primary Population, enter 50. Otherwise, assign the score from the "Nearest Individual" column of PA Table 8 (page 23), for the nearest distance ring in which you have identified a Secondary Population.
6. **Primary Sensitive Environments:** List the sensitive environments (on or within ¼ mile of the site) subject to exposure from a suspected air release of hazardous substances from the site. Assign values for sensitive environment type (from PA Table 5, page 16) and/or wetland acreage (from PA Table 9, page 23). Sum the values and enter the total as the factor score.
7. **Secondary Sensitive Environments:** On PA Table 10 (page 23), list the sensitive environments that are in distance categories within ½ mile not suspected to be subject to exposure from airborne hazardous substances. Assign a value for each environment (PA Tables 5 and 9). Record the value for each Secondary Sensitive Environment on PA Table 10 (page 23), and multiply by the distance weight for that distance category. Sum the products, and enter the total as the factor score.
8. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

**Waste Characteristics (WC)**

9. **Waste Characteristics score** is assigned from page 4. However, if any Primary Target has been identified for the air pathway, assign the higher of the score calculated on page 4 or a score of 32.

**Air Pathway Score:** Multiply the scores for LR, T, and WC. Divide the product by 82,500. Round the result to the nearest integer. If the result is greater than 100, assign 100.

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.

SITE SCORE CALCULATION

	S	S <sup>2</sup>
GROUND WATER PATHWAY SCORE (S <sub>gw</sub> ):	8.53	72.76
SURFACE WATER PATHWAY SCORE (S <sub>sw</sub> ):	3.64	14.75
SOIL EXPOSURE PATHWAY SCORE (S <sub>so</sub> ):	5.2	27.04
AIR PATHWAY SCORE (S <sub>a</sub> ):	9.70	94.10
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{so}^2 + S_a^2}{4}} = 7.22$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?	<input type="checkbox"/>	<input type="checkbox"/>
A. If yes, identify the wells recommended for sampling during the SI.		
B. If yes, how many people are served by these threatened wells? _____		
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?		
A. Drinking water intake	<input type="checkbox"/>	<input type="checkbox"/>
B. Fishery	<input type="checkbox"/>	<input type="checkbox"/>
C. Sensitive environment: wetland, critical habitat, others	<input type="checkbox"/>	<input type="checkbox"/>
D. If yes, identify the targets recommended for sampling during the SI.		
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:	<input type="checkbox"/>	<input type="checkbox"/>

SITE SCORE CALCULATION

	S	S <sup>2</sup>
GROUND WATER PATHWAY SCORE (S <sub>gw</sub> ):	8.53	72.8
SURFACE WATER PATHWAY SCORE (S <sub>sw</sub> ):	3.84	14.75
SOIL EXPOSURE PATHWAY SCORE (S <sub>se</sub> ):	5.20	27.04
AIR PATHWAY SCORE (S <sub>a</sub> ):	9.70	94.09
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{se}^2 + S_a^2}{4}} = 7.22$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?  A. If yes, identify the wells recommended for sampling during the SI. _____  B. If yes, how many people are served by these threatened wells? _____	<input type="checkbox"/>	<input type="checkbox"/>
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?  A. Drinking water intake B. Fishery C. Sensitive environment: wetland, critical habitat, others D. If yes, identify the targets recommended for sampling during the SI. _____ _____	<input type="checkbox"/>       <input type="checkbox"/>       <input type="checkbox"/>	<input type="checkbox"/>       <input type="checkbox"/>       <input type="checkbox"/>
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:  _____ _____	<input type="checkbox"/>	<input type="checkbox"/>

# GROUND WATER PATHWAY CRITERIA LIST

Site Name:  
Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	_____ ft
Distance to the nearest drinking-water well:	_____ ft

LIKELIHOOD OF RELEASE

	A	B	Refere
	Suspected Release <small>(550)</small>	No Suspected Release <small>(500 or 340)</small>	
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.	550		
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.			
LR =	550		

TARGETS

3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). $0$ people $\times 10 =$	0		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.	15		
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	20		
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	0		
7. RESOURCES: A score of 5 is assigned.	5	5	
T =	40		

WASTE CHARACTERISTICS

8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	0		
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	32		
WC =	32		

GROUND WATER PATHWAY SCORE:

$$\frac{LR \times T \times WC}{82,500}$$

(Subject to a maximum of 100)  
8.53

**SURFACE WATER PATHWAY  
LIKELIHOOD OF RELEASE AND DRINKING WATER THREAT SCORESHEET**

<i>Pathway Characteristics</i>	
Do you suspect a release (see Surface Water Pathway Criteria List, page 11)?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Distance to surface water:	_____ ft
Flood Frequency:	_____ yrs
What is the downstream distance to the nearest drinking-water intake?	_____ miles
nearest fishery? _____ miles	nearest sensitive environment? _____ miles

**LIKELIHOOD OF RELEASE**

	A <i>Suspected Release</i>	B <i>No Suspected Release</i>	<i>Referen</i>
1. <b>SUSPECTED RELEASE:</b> If you suspect a release to surface water (see page 11), assign a score of 550, and use only column A for this pathway.	550 <small>(550)</small>		
2. <b>NO SUSPECTED RELEASE:</b> If you do not suspect a release to surface water, and the distance to surface water is 2,500 feet or less, assign a score of 500; otherwise, assign a score from the table below. Use only column B for this pathway.		<small>(500, 400, 300 = 100)</small>	
<b>LR =</b>	550 <small>(550)</small>	<small>(500, 400, 300 = 100)</small>	

<i>Floodplain</i>	<i>Score</i>
Site in annual or 10-yr floodplain	500
Site in 100-yr floodplain	400
Site in 500-yr floodplain	300
Site outside 500-yr floodplain	100

**DRINKING WATER THREAT TARGETS**

3. Determine the water body types, flows (if applicable), and number of people served by all drinking-water intakes within the 15-mile target distance limit. If there are no drinking-water intakes within the target distance limit, assign a total Targets score of 5 at the bottom of this page (Resources only) and proceed to page 14.																		
<table border="1"> <thead> <tr> <th><i>Intake Name</i></th> <th><i>Water Body Type</i></th> <th><i>Flow</i></th> <th><i>People Served</i></th> </tr> </thead> <tbody> <tr> <td>City of Sandusky</td> <td>Great Lake</td> <td>N/A cfs</td> <td align="center">47,000</td> </tr> <tr> <td>City of Huron</td> <td>Great Lake</td> <td>N/A cfs</td> <td align="center">7,000</td> </tr> <tr> <td>_____</td> <td>_____</td> <td>_____ cfs</td> <td>_____</td> </tr> </tbody> </table>	<i>Intake Name</i>	<i>Water Body Type</i>	<i>Flow</i>	<i>People Served</i>	City of Sandusky	Great Lake	N/A cfs	47,000	City of Huron	Great Lake	N/A cfs	7,000	_____	_____	_____ cfs	_____		
<i>Intake Name</i>	<i>Water Body Type</i>	<i>Flow</i>	<i>People Served</i>															
City of Sandusky	Great Lake	N/A cfs	47,000															
City of Huron	Great Lake	N/A cfs	7,000															
_____	_____	_____ cfs	_____															
4. <b>PRIMARY TARGET POPULATION:</b> If you suspect any drinking-water intake listed above has been exposed to hazardous substances from the site (see Surface Water Pathway Criteria List, page 11), list the intake name(s) and calculate the factor score based on the number of people served.																		
_____ people x 10 = 0	0																	
5. <b>SECONDARY TARGET POPULATION:</b> Determine the Secondary Target Population score from PA Table 3 based on the populations using drinking-water from intakes that you do NOT suspect have been exposed to hazardous substances from the site.																		
Are any intakes part of a blended system? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	1																	
If yes, attach a page to show apportionment calculations.																		
6. <b>NEAREST INTAKE:</b> If you have identified any Primary Targets for the drinking water threat (Factor 4), assign a score of 50; otherwise, assign the Nearest Intake score from PA Table 3. If no drinking-water intake exists within the 15-mile target distance limit, assign a score of zero.	0																	
7. <b>RESOURCES:</b> A score of 5 is assigned.	5	5																
<b>T =</b>	6

**SOIL EXPOSURE PATHWAY CRITERIA LIST**

Site Name:  
 Date:

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident populations. This chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

SOIL EXPOSURE PATHWAY				
SUSPECTED CONTAMINATION	RESIDENT POPULATION

### AIR PATHWAY SCORESHEET

<i>Pathway Characteristics</i>	
Do you suspect a release (see Air Pathway Criteria List, page 21)?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Distance to the nearest individual:	_____ ft

#### LIKELIHOOD OF RELEASE

	A	B	Reference
	<i>Suspected Release</i>	<i>No Suspected Release</i>	
1. <b>SUSPECTED RELEASE:</b> If you suspect a release to air (see page 21), assign a score of 550, and use only column A for this pathway.	(550)		
2. <b>NO SUSPECTED RELEASE:</b> If you do not suspect a release to air, assign a score of 500, and use only column B for this pathway.		(500) 500	
<b>LR =</b>		500	

#### TARGETS

3. <b>PRIMARY TARGET POPULATION:</b> Determine the number of people subject to exposure from a release of hazardous substances through the air (see Air Pathway Criteria List, page 21). _____ people x 10 =									
4. <b>SECONDARY TARGET POPULATION:</b> Determine the number of people within the 4-mile target distance limit, and assign the total population score from PA Table 8.		25							
5. <b>NEAREST INDIVIDUAL:</b> If you have identified any Primary Targets for the air pathway, assign a score of 50; otherwise, assign the highest Nearest Individual score from PA Table 8.	(50, 20, 7, 2, 1, or 0)	(20, 7, 2, 1, or 0)							
6. <b>PRIMARY SENSITIVE ENVIRONMENTS:</b> Sum the sensitive environment values (PA Table 5) and wetland acreage values (PA Table 9) for environments subject to exposure from air hazardous substances (see Air Pathway Criteria List, page 21).									
<table border="1" style="margin: auto; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;"><i>Sensitive Environment Type</i></th> <th style="text-align: left;"><i>Value</i></th> </tr> </thead> <tbody> <tr><td>_____</td><td>_____</td></tr> <tr><td>_____</td><td>_____</td></tr> </tbody> </table>	<i>Sensitive Environment Type</i>	<i>Value</i>	_____	_____	_____	_____			
<i>Sensitive Environment Type</i>	<i>Value</i>								
_____	_____								
_____	_____								
<b>Sum =</b>									
7. <b>SECONDARY SENSITIVE ENVIRONMENTS:</b> Use PA Table 10 to determine the score for secondary sensitive environments.		0							
8. <b>RESOURCES:</b> A score of 5 is assigned.	(5)	(5)							
<b>T =</b>		50							

#### WASTE CHARACTERISTICS

9. A. If you have identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.			
B. If you have NOT identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4.	(100, 32, or 18)	(100, 32, or 18)	
<b>WC =</b>		32	

**AIR PATHWAY SCORE:**

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.

GROUND WATER PATHWAY  
GROUND WATER USE DESCRIPTION

**Describe Ground Water Use Within 4-miles of the Site:**

(Provide generalized stratigraphy; information on aquifers, municipal, and or private wells)

See report sections 3.1 and 3.2.

**Show calculations of ground water drinking water populations:**

See report section 3.2.

# GROUND WATER PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of some conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the responses for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Is the site located in karst terrain?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	<u>25</u> ft
Distance to the nearest drinking-water well:	<u>2000</u> ft

LIKELIHOOD OF RELEASE

	A Suspected Release (550)	B No Suspected Release (500 or 340)	Referenc
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.			
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.		346	
	LR =	340	

TARGETS

3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). <u>0</u> people x 10 =	N/A		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, attach a page to show apportionment calculations.		15	
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.		20	
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.		0	
7. RESOURCES: A score of 5 is assigned.	5	5	
	T =	40	

WASTE CHARACTERISTICS

8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	(100 or 32)		
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	(100, 32, or 18)	(100, 32, or 18)	18
	WC =		18

GROUND WATER PATHWAY SCORE:

$$\frac{LR \times T \times WC}{82,500}$$

SOIL EXPOSURE PATHWAY SCORESHEET

*Pathway Characteristics*

Do any people live on or within 200 ft of areas of suspected contamination? Yes \_\_\_ No X

Do any people attend school or day care on or within 200 ft of areas of suspected contamination? Yes \_\_\_ No X

Is the facility active? Yes X No \_\_\_ If yes, estimate the number of workers: 150

LIKELIHOOD OF EXPOSURE		A	B	Referenc.
		<i>Suspected Contamination</i>	<i>No Suspected Contamination</i>	
1. SUSPECTED CONTAMINATION: Surficial contamination is assumed. A score of 550 is assigned.	LE =	550		

RESIDENT POPULATION THREAT TARGETS

2. RESIDENT POPULATION: Determine the number of people occupying residences or attending school or day care on or within 200 feet of areas of suspected contamination (see Soil Exposure Pathway Criteria List, page 18). <u>0</u> people x 10 =		0												
3. RESIDENT INDIVIDUAL: If you have identified any Resident Population (Factor 2), assign a score of 50; otherwise, assign a score of 0.		0												
4. WORKERS: Assign a score from the following table based on the total number of workers at the facility and nearby facilities with suspected contamination:														
<table border="1" style="margin-left: 20px;"> <thead> <tr> <th>Number of Workers</th> <th>Score</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> </tr> <tr> <td>1 to 100</td> <td>5</td> </tr> <tr> <td>101 to 1,000</td> <td>10</td> </tr> <tr> <td>&gt; 1,000</td> <td>15</td> </tr> </tbody> </table>	Number of Workers	Score	0	0	1 to 100	5	101 to 1,000	10	> 1,000	15		10		
Number of Workers	Score													
0	0													
1 to 100	5													
101 to 1,000	10													
> 1,000	15													
5. TERRESTRIAL SENSITIVE ENVIRONMENTS: Assign a value from PA Table 7 for each terrestrial sensitive environment that is located on an area of suspected contamination:														
<table border="1" style="margin-left: 20px;"> <thead> <tr> <th>Terrestrial Sensitive Environment Type</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td> </td> <td> </td> </tr> <tr> <td> </td> <td> </td> </tr> </tbody> </table>	Terrestrial Sensitive Environment Type	Value						0						
Terrestrial Sensitive Environment Type	Value													
6. RESOURCES: A score of 5 is assigned.	Sum =	5												
	T =	15												

WASTE CHARACTERISTICS

7. Assign the waste characteristics score calculated on page 4.	WC =	18		
---	------	----	--	--

RESIDENT POPULATION THREAT SCORE:

LE x T x WC

82,500

(Subject to a maximum of 100)

TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned Value</i>
Terrestrial critical habitat for Federally designated endangered or threatened species	100
National Park	
Designated Federal Wilderness Area	
National Monument	
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species	75
National Preserve (terrestrial)	
National or State terrestrial Wildlife Refuge	
Federal land designated for protection of natural ecosystems	
Administratively proposed Federal Wilderness Area	
Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	
Terrestrial habitat used by State designated endangered or threatened species	50
Terrestrial habitat used by species under review for Federally designated endangered or threatened status	
State lands designated for wildlife or game management	25
State designated Natural Areas	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

# AIR PATHWAY CRITERIA LIST

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

AIR PATHWAY		
SUSPECTED RELEASE		PRIMARY TARGETS
Y E S	N O	UNKNOWN
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Have odors been reported?		
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Has a release of hazardous substances to the air been directly observed?		
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Are there any reports of adverse health effects (e.g., headaches, nausea, dizziness) potentially resulting from migration of hazardous substances through the air?		
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Is there any circumstantial evidence of an air release?		
<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Other criteria? _____		
<input type="checkbox"/>	<input type="checkbox"/>	
SUSPECTED RELEASE?		

*If you suspect a release to air, evaluate all populations and sensitive environments within 1/4 mile (including those onsite) as Primary Targets.*

Summarize the rationale for suspected release (attach an additional page if necessary):

### AIR PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Air Pathway Criteria List, page 21)?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Distance to the nearest individual:	1000 ft

#### LIKELIHOOD OF RELEASE

	A	B
	Suspected Release	No Suspected Release
(550)		
(500)		500
LR =		500

References

1. **SUSPECTED RELEASE:** If you suspect a release to air (see page 21), assign a score of 550, and use only column A for this pathway.
2. **NO SUSPECTED RELEASE:** If you do not suspect a release to air, assign a score of 500, and use only column B for this pathway.

#### TARGETS

3. **PRIMARY TARGET POPULATION:** Determine the number of people subject to exposure from a release of hazardous substances through the air (see Air Pathway Criteria List, page 21). \_\_\_\_\_ people x 10 =
4. **SECONDARY TARGET POPULATION:** Determine the number of people within the 4-mile target distance limit, and assign the total population score from PA Table 8.
5. **NEAREST INDIVIDUAL:** If you have identified any Primary Targets for the air pathway, assign a score of 50; otherwise, assign the highest Nearest Individual score from PA Table 8.
6. **PRIMARY SENSITIVE ENVIRONMENTS:** Sum the sensitive environment values (PA Table 5) and wetland acreage values (PA Table 9) for environments subject to exposure from air hazardous substances (see Air Pathway Criteria List, page 21).
 

Sensitive Environment Type	Value
7. **SECONDARY SENSITIVE ENVIRONMENTS:** Use PA Table 10 to determine the score for secondary sensitive environments.
8. **RESOURCES:** A score of 5 is assigned.

		25
(50,20,7,2,1, or 0)	(20,7,2,1, or 0)	20
Sum =		
		0
(5)	(5)	5
T =		50

#### WASTE CHARACTERISTICS

9. A. If you have identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.
- B. If you have NOT identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4.

(100 or 32)		
(100,32, or 18)	(100,32, or 18)	18

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.

SITE SCORE CALCULATION

	S	S <sup>2</sup>
GROUND WATER PATHWAY SCORE (S <sub>gw</sub> ):	2.97	8.82
SURFACE WATER PATHWAY SCORE (S <sub>sw</sub> ):	2.16	4.67
SOIL EXPOSURE PATHWAY SCORE (S <sub>se</sub> ):	3.80	14.4
AIR PATHWAY SCORE (S <sub>a</sub> ):	5.45	29.7
SITE SCORE:	$\sqrt{\frac{S_{gw}^2 + S_{sw}^2 + S_{se}^2 + S_a^2}{4}} = 3.80$	

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?	<input type="checkbox"/>	<input type="checkbox"/>
A. If yes, identify the wells recommended for sampling during the SI.		
B. If yes, how many people are served by these threatened wells? _____		
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?		
A. Drinking water intake	<input type="checkbox"/>	<input type="checkbox"/>
B. Fishery	<input type="checkbox"/>	<input type="checkbox"/>
C. Sensitive environment: wetland, critical habitat, others	<input type="checkbox"/>	<input type="checkbox"/>
D. If yes, identify the targets recommended for sampling during the SI.		
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:	<input type="checkbox"/>	<input type="checkbox"/>

# GROUND WATER PATHWAY CRITERIA LIST

Site Name: \_\_\_\_\_

Date: \_\_\_\_\_

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of site conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the well that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

GROUND WATER PATHWAY					
<i>SUSPECTED RELEASE</i>			<i>PRIMARY TARGETS</i>

## GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes ___ No <input checked="" type="checkbox"/>
Is the site located in karst terrain?	Yes <input checked="" type="checkbox"/> No ___
Depth to aquifer:	70 ft
Distance to the nearest drinking-water well:	10,000 ft

### LIKELIHOOD OF RELEASE

	A Suspected Release <small>(560)</small>	B No Suspected Release <small>(500 or 340)</small>	Refer:
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.			
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.		500	
LR =		500	

### TARGETS

	A <small>(50, 20, 10, 0, 5, 3, 2, or 0)</small>	B <small>(20, 10, 0, 5, 3, 2, or 0)</small>	Refer:
3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). <u>0</u> people x 10 =			
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes ___ No ___ If yes, attach a page to show apportionment calculations.		15	
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.		20	
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.		0	
7. RESOURCES: A score of 5 is assigned.	5	5	
T =		40	

### WASTE CHARACTERISTICS

DRAFT

NOV 06 1990

## SURFACE WATER PATHWAY ENVIRONMENTAL THREAT

### Likelihood of Release (LR)

LR is the same for all threats in the Surface Water Pathway. Enter the LR score determined on page 12.

### Environmental Threat Targets (T)

11. There are many different types of Environmental Targets. Refer to PA Table 5 (page 16) for a listing of sensitive environments that are evaluated for the Surface Water Pathway Environmental Threat. In the space provided, identify all sensitive environments located within the 15-mile target distance limit. Indicate the surface water body type and flow at each sensitive environment. Gauging station data for most surface water bodies should be available from USGS or other sources. In the absence of gauging station data, see PA Table 4 (page 13) for a listing of surface water body types and associated flow categories. The flow for lakes is determined by the sum of flows of streams entering or leaving the lake. Note that, if there are no sensitive environments within the 15-mile target distance limit, the Environmental Targets score is zero; and you should proceed to the Waste Characteristics evaluation.

12. **Primary Sensitive Environments** are surface water sensitive environments within the 15-mile target distance limit that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Surface Water Pathway Criteria List (page 11) to make this determination. If you identify any Primary Sensitive Environments, enter 300 as the Primary Sensitive Environments factor score, and do not evaluate Secondary Sensitive Environments. Note that if you do not suspect a release, there are no Primary Sensitive Environments.

13. **Secondary Sensitive Environments** are surface water sensitive environments that you do not suspect have been exposed to hazardous substances. If you have identified Secondary Sensitive Environments, evaluate them based on flow by the following process: if there are any Secondary Sensitive Environments on surface water bodies with flows of 100 cfs or less, list them in the table. Use PA Table 4 (page 13) to determine the appropriate dilution weight(s).

Use PA Tables 5 and 6 (page 16) to determine the appropriate value for sensitive environment type. When measuring length of wetlands that are located on both sides of a surface water body, sum the frontage areas. For sensitive environments that fall into more than one of the categories listed in PA Table 5, sum the values for each type to determine the environment value. For example, a wetland of 1.5 miles total length (value of 50) that is also a critical habitat for a Federally endangered species (value of 100) would receive an environment value of 150.

For each sensitive environment, multiply the dilution weight by the environment type/length of wetlands value and record the product in the far right column. Sum the values in the far right column and enter the total as the Secondary Sensitive Environments score. Do not evaluate any other Secondary Sensitive Environments. However, if all Secondary Sensitive Environments are on surface water bodies with flows of greater than 100 cfs, assign a Secondary Sensitive Environments score of 10.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident population. This chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

# AIR PATHWAY CRITERIA LIST

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize a suspected release. This chart will record your professional judgment in evaluating this factor.

The "Suspected Release" section of the chart guides you through evaluation of some conditions to help hypothesize whether a release from the site is likely. For the Air Pathway, if a release is suspected, "Primary Targets" are any residents, workers, students, or sensitive environments within 1/4 mile of the site.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?	<input type="checkbox"/>	<input type="checkbox"/>
A. If yes, identify the wells recommended for sampling during the SI.		
B. If yes, how many people are served by these threatened wells? _____		
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?		
A. Drinking water intake	<input type="checkbox"/>	<input type="checkbox"/>
B. Fishery	<input type="checkbox"/>	<input type="checkbox"/>
C. Sensitive environment: wetland, critical habitat, others	<input type="checkbox"/>	<input type="checkbox"/>
D. If yes, identify the targets recommended for sampling during the SI.		
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:	<input type="checkbox"/>	<input type="checkbox"/>

**SURFACE WATER PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a suspected release and identifying primary targets. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize suspected release or to identify primary targets. This chart will record your professional judgment in evaluating these factors.

The "Suspected Release" section of the chart guides you through evaluation of some site, source, and pathway conditions to help hypothesize whether a release from the site is likely. If a release is suspected, use the "Primary Targets" section to guide you through evaluation of some conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once depending on the number of targets you feel may be considered "primary." In the "Primary Targets" section on this sheet, record the response for the target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question. If you check the "Suspected Release" box as "yes", make sure that you assign a Likelihood of Release value of 550 for the pathway.

SURFACE WATER PATHWAY

Summarize the rationale for Primary Targets (attach an additional page if necessary):

# DRAFT

NOV 06 1990

## SURFACE WATER PATHWAY

### Pathway Characteristics

The surface water pathway includes three threats: Drinking Water Threat, Human Food Chain Threat, and Environmental Threat. Answer the questions at the top of the page. Refer to the Surface Water Pathway Criteria List (page 11) to hypothesize whether you suspect hazardous substances have been released to surface water. Enter the distance to surface water (the shortest overland drainage distance from a source to a surface water body). State the floodplain in which the site is located (e.g., 100-yr, 200-yr). If the site is located in more than one floodplain, use the most frequent flooding event. Identify surface water uses for the 15-mile surface water migration path.

### Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Surface Water Pathway Criteria List (page 11). Remember to use only Column A for this pathway if you score a suspected release to surface water, and do not evaluate factor 2.
2. **No Suspected Release:** Determine score based on the shortest overland drainage distance from a source to a surface water body. If distance to surface water is greater than 2,500 feet, determine this score based on flood frequency. Remember to use only Column B to score this pathway if you do not suspect that hazardous substances have been released.

### Drinking Water Threat Targets (T)

3. List all drinking-water intakes on downstream surface water bodies within the 15-mile target distance limit. Provide the intake name, the type of water body on which the intake is located, the flow of the water body, and the number of people served by the intake (apportion the population if part of a blended system).
4. **Primary Target Population:** Evaluate any populations served by drinking-water intakes that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Surface Water Pathway Criteria List (page 11) to make this determination. In the space provided, enter the population served by all intakes you suspect have been exposed to hazardous substances, and multiply by 10 to derive the Primary Target Population score. Remember, if you do not suspect a release, there is no Primary Target Population.
5. **Secondary Target Population:** On PA Table 3 (page 13), evaluate any populations served by drinking-water intakes that you do not suspect have been exposed to hazardous substances. Enter the population served by intakes for each flow category. Circle the assigned population value and enter it in the far right column. Sum the population values and enter the total as the Secondary Target Population score.

Gauging station data for most surface water bodies should be available from USGS or other sources. In the absence of gauging station data, see PA Table 4 (page 13) for a listing of surface water body types and associated flow categories. The flow for lakes is determined by the sum of flows of streams entering or leaving the lake. Note that the flow category "mixing zone of quiet flowing rivers" can be used for rivers with flows of at least 10 cfs, but only for intakes within 3 miles of the probable point of entry.

6. **Nearest Intake score** represents the threat posed to the drinking-water intake that is most likely to be exposed to hazardous substances. If you have identified a Primary Target Population, assign a score of 50. Otherwise assign the score determined from PA Table 3 (page 13) for the lowest-flowing water body on which there is an intake.
7. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

RECOMMENDATION

SUMMARY

	YES	NO
1. Is there a high possibility of a threat to nearby drinking water wells by migration of hazardous substances in ground water?	<input type="checkbox"/>	<input type="checkbox"/>
A. If yes, identify the wells recommended for sampling during the SI.		
B. If yes, how many people are served by these threatened wells? _____		
2. Are any of the following suspected to have been exposed to hazardous substances through surface water migration from the site?		
A. Drinking water intake	<input type="checkbox"/>	<input type="checkbox"/>
B. Fishery	<input type="checkbox"/>	<input type="checkbox"/>
C. Sensitive environment: wetland, critical habitat, others	<input type="checkbox"/>	<input type="checkbox"/>
D. If yes, identify the targets recommended for sampling during the SI.		
3. Do people reside or attend school or day care on or within 200 ft of any area of suspected contamination?	<input type="checkbox"/>	<input type="checkbox"/>
4. Are there public health concerns at this site that are not addressed by PA scoring considerations? If yes, explain:	<input type="checkbox"/>	<input type="checkbox"/>

GROUND WATER PATHWAY SCORESHEET

Pathway Characteristics	
Do you suspect a release (see Ground Water Pathway Criteria List, page 7)?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Is the site located in karst terrain?	Yes <input type="checkbox"/> No <input type="checkbox"/>
Depth to aquifer:	<u>10</u> ft
Distance to the nearest drinking-water well:	<u>1584</u> ft

LIKELIHOOD OF RELEASE

	A	B	Referenc
	Suspected Release <small>(550)</small>	No Suspected Release <small>(500 or 340)</small>	
1. SUSPECTED RELEASE: If you suspect a release to ground water (see page 7), assign a score of 550, and use only column A for this pathway.			
2. NO SUSPECTED RELEASE: If you do not suspect a release to ground water, and the site is in karst terrain or the depth to aquifer is 70 feet or less, assign a score of 500; otherwise, assign a score of 340. Use only column B for this pathway.			
LR =	550		

TARGETS

3. PRIMARY-TARGET POPULATION: Determine the number of people served by drinking water from wells that you suspect have been exposed to hazardous substances from the site (see Ground Water Pathway Criteria List, page 7). <u>0</u> people x 10 =	0		
4. SECONDARY TARGET POPULATION: Determine the number of people served by drinking water from wells that you do NOT suspect have been exposed to hazardous substances from the site, and assign the total population score from PA Table 2. Are any wells part of a blended system? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, attach a page to show apportionment calculations.	15		
5. NEAREST WELL: If you have identified any Primary Targets for ground water, assign a score of 50; otherwise, assign the highest Nearest Well score from PA Table 2. If no drinking-water wells exist within 4 miles, assign a score of zero.	20		
6. WELLHEAD PROTECTION AREA (WHPA): Assign a score of 20 if any portion of a designated WHPA is within 1/4 mile of the site; assign 5 if from 1/4 to 4 miles.	0		
7. RESOURCES: A score of 5 is assigned.	5	5	
T =	40		

WASTE CHARACTERISTICS

8. A. If you have identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.	0		
B. If you have NOT identified any Primary Targets for ground water, assign the waste characteristics score calculated on page 4.	18		
WC =	18		

GROUND WATER PATHWAY SCORE:

$$\frac{LR \times T \times WC}{82,500}$$

(subject to a maximum of 100)
4.8

DRAFT

NOV 06 1990

## SURFACE WATER PATHWAY ENVIRONMENTAL THREAT

### Likelihood of Release (LR)

LR is the same for all threats in the Surface Water Pathway. Enter the LR score determined on page 12.

### Environmental Threat Targets (T)

11. There are many different types of Environmental Targets. Refer to PA Table 5 (page 16) for a listing of sensitive environments that are evaluated for the Surface Water Pathway Environmental Threat. In the space provided, identify all sensitive environments located within the 15-mile target distance limit. Indicate the surface water body type and flow at each sensitive environment. Gauging station data for most surface water bodies should be available from USGS or other sources. In the absence of gauging station data, see PA Table 4 (page 13) for a listing of surface water body types and associated flow categories. The flow for lakes is determined by the sum of flows of streams entering or leaving the lake. Note that, if there are no sensitive environments within the 15-mile target distance limit, the Environmental Targets score is zero; and you should proceed to the Waste Characteristics evaluation.

12. **Primary Sensitive Environments** are surface water sensitive environments within the 15-mile target distance limit that you suspect have been exposed to hazardous substances released from the site. Use professional judgment guided by the Surface Water Pathway Criteria List (page 11) to make this determination. If you identify any Primary Sensitive Environments, enter 300 as the Primary Sensitive Environments factor score, and do not evaluate Secondary Sensitive Environments. Note that if you do not suspect a release, there are no Primary Sensitive Environments.

13. **Secondary Sensitive Environments** are surface water sensitive environments that you do not suspect have been exposed to hazardous substances. If you have identified Secondary Sensitive Environments, evaluate them based on flow by the following process: if there are any Secondary Sensitive Environments on surface water bodies with flows of 100 cfs or less, list them in the table. Use PA Table 4 (page 13) to determine the appropriate dilution weight(s).

Use PA Tables 5 and 6 (page 16) to determine the appropriate value for sensitive environment type. When measuring length of wetlands that are located on both sides of a surface water body, sum the frontage areas. For sensitive environments that fall into more than one of the categories listed in PA Table 5, sum the values for each type to determine the environment value. For example, a wetland of 1.5 miles total length (value of 50) that is also a critical habitat for a Federally endangered species (value of 100) would receive an environment value of 150.

For each sensitive environment, multiply the dilution weight by the environment type/length of wetlands value and record the product in the far right column. Sum the values in the far right column and enter the total as the Secondary Sensitive Environments score. Do not evaluate any other Secondary Sensitive Environments. However, if all Secondary Sensitive Environments are on surface water bodies with flows of greater than 100 cfs, assign a Secondary Sensitive Environments score of 10.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

PA TABLE 5: SURFACE WATER AND AIR SENSITIVE ENVIRONMENTS VALUES

<i>Sensitive Environment</i>	<i>Assigned Value</i>
Critical habitat for Federally designated endangered or threatened species	100
Marine Sanctuary	
National Park	
Designated Federal Wilderness Area	
Ecologically important areas identified under the Coastal Zone Wilderness Act	
Sensitive Areas identified under the National Estuary Program or Near Coastal Water Program of the Clean Water Act	
Critical Areas identified under the Clean Lakes Program of the Clean Water Act (subareas in lakes or entire small lakes)	
National Monument	
National Seashore Recreation Area	
National Lakeshore Recreation Area	
Habitat known to be used by Federally designated or proposed endangered or threatened species	75
National Preserve	
National or State Wildlife Refuge	
Unit of Coastal Barrier Resources System	
Federal land designated for the protection of natural ecosystems	
Administratively Proposed Federal Wilderness Area	
Spawning areas critical for the maintenance of fish/shellfish species within a river system, bay or estuary	
Migratory pathways and feeding areas critical for the maintenance of anadromous fish species in a river system	
Terrestrial areas utilized by large or dense aggregations of vertebrate animals (semi-aquatic foragers) for breeding	
National river reach designated as recreational	
Habitat known to be used by State designated endangered or threatened species	50
Habitat known to be used by a species under review as to its Federal endangered or threatened status	
Coastal Barrier (partially developed)	
Federally designated Scenic or Wild River	
State land designated for wildlife or game management	25
State designated Scenic or Wild River	
State designated Natural Area	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	
State designated areas for the protection/maintenance of aquatic life under the Clean Water Act	5
Wetlands	See PA Table 6 (Surface Water Pathway) or PA Table 9 (Air Pathway)

PA TABLE 6: SURFACE WATER WETLANDS FRONTAGE VALUES

<i>Total Length of Wetlands</i>	<i>Assigned Value</i>
Less than 0.1 mile	0
0.1 to 1 mile	25
Greater than 1 to 2 miles	50
Greater than 2 to 3 miles	75
Greater than 3 to 4 miles	100
Greater than 4 to 8 miles	150
Greater than 8 to 12 miles	250
Greater than 12 to 16 miles	350
Greater than 16 to 20 miles	450
Greater than 20 miles	500

# DRAFT

NOV 06 1990

## SURFACE WATER PATHWAY WASTE CHARACTERISTICS, THREAT, AND PATHWAY SCORE

### Waste Characteristics (WC)

14. Waste Characteristics score is assigned from page 4. However, if any Primary Target has been identified for any surface water threat, assign the higher of the score calculated on page 4 or a score of 32.

### Surface Water Pathway Threat Scores

Fill in the matrix with the appropriate scores from the previous pages. To calculate the score for each threat: multiply the scores for LR, T and WC, divide the product by 82,500, and round the result to the nearest integer. The Drinking Water Threat and Human Food Chain Threat are subject to a maximum of 100. The Environmental Threat is subject to a maximum of 60. Enter the rounded threat scores into the right side of the table.

### Surface Water Pathway Score

Sum the individual threat scores to determine the Surface Water Pathway Score. If the sum is greater than 100, assign 100.

**DRAFT NOV 06 1990**  
**SOIL EXPOSURE PATHWAY CRITERIA LIST**

Site Name:

Date:

This chart provides guidelines to assist you in hypothesizing the presence of a resident population. It is expected that not all of this information will be available during the PA. Also, these criteria are not all-inclusive; list any other criteria you use to hypothesize resident populations. This chart will record your professional judgment in evaluating this factor.

Use the resident population section to guide you through evaluation of some site and source conditions that will help identify targets likely to be exposed to hazardous substances. You may use this section of the chart more than once, depending on the number of nearby people you feel may be considered part of a resident population. Record the responses for the resident population target that you feel has the highest probability of being exposed to hazardous substances.

Check the boxes to indicate a "yes", "no", or "unknown" answer to each question.

_____	_____													
6. RESOURCES: A score of 5 is assigned.	Sum =	5												
	T =	15												

WASTE CHARACTERISTICS

7. Assign the waste characteristics score calculated on page 4.	WC =	18	
---	------	----	--

RESIDENT POPULATION THREAT SCORE:	$\frac{LE \times T \times WC}{82,500}$	1.8
NEARBY POPULATION THREAT SCORE: Assign a score of 2		2
SOIL EXPOSURE PATHWAY SCORE: Resident Population Threat + Nearby Population Threat		3.8

SOIL EXPOSURE PATHWAY

Pathway Characteristics

Answer the questions at the top of the page. Identify people who are most likely to be regularly exposed to contamination at the site because they work at the facility or reside or attend school or day care on or within 200 feet of an area of suspected contamination. If the site is active, estimate the number of full or part-time workers at this facility. Note that evaluation of targets is based on current site conditions.

Likelihood of Exposure (LE)

1. **Suspected Contamination:** The PA always assumes that surficial contamination exists. Do not override this assumption. Surficial contamination often exists even if wastes have been "removed" or are believed to be buried below the surface. A 550 is automatically assigned for this factor; only Column A can be scored for this pathway.

Resident Population Threat Targets (T)

2. **Resident Population** corresponds to "primary targets" for the migration pathways. Determine if there are people living or attending school or day care on or within 200 feet of areas of suspected contamination. Use professional judgment guided by the Soil Exposure Pathway Criteria List (page 18) to make this determination. Record the number of people identified as Resident Population. Multiply this population by 10 to determine the Resident Population factor score.

3. **Resident Individual:** If you have identified a Resident Population, assign a score of 50. Otherwise, assign a score of 0.

4. **Workers:** Estimate the number of full and part-time workers regularly present at this facility and other facilities where contamination is suspected. Assign a score for the workers factor from the table.

5. **Terrestrial Sensitive Environments:** In the table provided, list each Terrestrial Sensitive Environment located on areas of suspected contamination. Use PA Table 7 (page 20) to assign a value for each sensitive environment. Sum the values of all the terrestrial sensitive environments and assign the total as the factor score.

6. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A.

Waste Characteristics (WC)

7. Enter the WC score determined on page 4. There is no exception for this pathway.

**Soil Exposure Pathway Score:** Calculate the Resident Population Threat Score by multiplying the scores for LE, T, and WC, and dividing the product by 82,500. Round the threat score to the nearest integer. If the result is greater than 100, assign 100. The Nearby Population Threat Score is always 2 for the PA; do not override this score. Add these 2 points to the calculated Resident Population Threat Score to determine the Soil Exposure Pathway Score, subject to a maximum of 100.

PA TABLE 7: SOIL EXPOSURE PATHWAY  
TERRESTRIAL SENSITIVE ENVIRONMENT VALUES

<i>Terrestrial Sensitive Environment</i>	<i>Assigned V.</i>
Terrestrial critical habitat for Federally designated endangered or threatened species	100
National Park	
Designated Federal Wilderness Area	
National Monument	
Terrestrial habitat known to be used by Federally designated or proposed threatened or endangered species	75
National Preserve (terrestrial)	
National or State terrestrial Wildlife Refuge	
Federal land designated for protection of natural ecosystems	
Administratively proposed Federal Wilderness Area	
Terrestrial areas utilized by large or dense aggregations of animals (vertebrate species) for breeding	
Terrestrial habitat used by State designated endangered or threatened species	50
Terrestrial habitat used by species under review for Federally designated endangered or threatened status	
State lands designated for wildlife or game management	25
State designated Natural Areas	
Particular areas, relatively small in size, important to maintenance of unique biotic communities	

Pathway Characteristics

Answer the questions at the top of the page. Refer to the Air Pathway Criteria List (page 21) to hypothesize whether you suspect hazardous substances have been released from the site to the air. Due to dispersion, releases to air are not as persistent as releases to water migration pathways and are much more difficult to detect. Develop hypotheses concerning the release of hazardous substances to air based on "real time" considerations. Record the distance (in feet) from any source to the nearest regularly occupied building.

Likelihood of Release (LR)

1. **Suspected Release:** Hypothesize based on professional judgment guided by the Air Pathway Criteria List (page 21). Remember to use only Column A for this pathway if you score a Suspected Release, and proceed to the target evaluation section.
2. **No Suspected Release:** If you do not score a Suspected Release, enter 500. Remember to use only Column B to score this pathway if you do not suspect hazardous substances are being released.

Targets (T)

3. **Primary Target Population** are those people subject to exposure from a suspected air release of hazardous substances from the site. Use professional judgment, guided by the Air Pathway Criteria List (page 21), to make this determination. Note that if you do not suspect a release, there are no primary population targets. If you score a Suspected Release, record the residential, student, and worker population located on or within ¼-mile of the site. Multiply this number of people by 10; enter the factor score in Column A.
4. **Secondary Target Population** are those people in distance categories not suspected to be subject to exposure from airborne hazardous substances. Determine the number of residents, students, and workers, and enter the summed population in PA Table 8 (page 23) for each distance category. Circle the population value for the distance category and record the value in the far right column of the table. Sum these values and enter the total as the factor score.
5. **Nearest Individual** represents the threat posed to the person most likely to be exposed to hazardous substances released from the site. If you have identified any Primary Population, enter 50. Otherwise, assign the score from the "Nearest Individual" column of PA Table 8 (page 23), for the nearest distance ring in which you have identified a Secondary Population.
6. **Primary Sensitive Environments:** List the sensitive environments (on or within ¼ mile of the site) subject to exposure from a suspected air release of hazardous substances from the site. Assign values for sensitive environment type (from PA Table 5, page 16) and/or wetland acreage (from PA Table 9, page 23). Sum the values and enter the total as the factor score.
7. **Secondary Sensitive Environments:** On PA Table 10 (page 23), list the sensitive environments that are in distance categories within ½ mile not suspected to be subject to exposure from airborne hazardous substances. Assign a value for each environment (PA Tables 5 and 9). Record the value for each Secondary Sensitive Environment on PA Table 10 (page 23), and multiply by the distance weight for that distance category. Sum the products, and enter the total as the factor score.
8. **Resources:** Score automatically assigned. Do not override; do not investigate resources.

**Target Scoring Instructions:** Sum the target scores in Column A (Suspected Release) or Column B (No Suspected Release).

Waste Characteristics (WC)

9. **Waste Characteristics** score is assigned from page 4. However, if any Primary Target has been identified for the air pathway, assign the higher of the score calculated on page 4 or a score of 32.

Air Pathway Score: Multiply the scores for LR, T, and WC. Divide the product by 82,500. Round the result to the nearest integer. If the result is greater than 100, assign 100.

AIR PATHWAY SCORESHEET

Pathway Characteristics

Do you suspect a release (see Air Pathway Criteria List, page 21)? Yes  No

Distance to the nearest individual: \_\_\_\_\_ ft

LIKELIHOOD OF RELEASE

	A Suspected Release <small>(550)</small>	B No Suspected Release <small>(500)</small>	References:
1. SUSPECTED RELEASE: If you suspect a release to air (see page 21), assign a score of 550, and use only column A for this pathway.			
2. NO SUSPECTED RELEASE: If you do not suspect a release to air, assign a score of 500, and use only column B for this pathway.		500	
LR =		500	

TARGETS

3. PRIMARY TARGET POPULATION: Determine the number of people subject to exposure from a release of hazardous substances through the air (see Air Pathway Criteria List, page 21). _____ people x 10 =											
4. SECONDARY TARGET POPULATION: Determine the number of people within the 4-mile target distance limit, and assign the total population score from PA Table 8.		25									
5. NEAREST INDIVIDUAL: If you have identified any Primary Targets for the air pathway, assign a score of 50; otherwise, assign the highest Nearest Individual score from PA Table 8.		20									
6. PRIMARY SENSITIVE ENVIRONMENTS: Sum the sensitive environment values (PA Table 5) and wetland acreage values (PA Table 9) for environments subject to exposure from air hazardous substances (see Air Pathway Criteria List, page 21).											
<table border="1" data-bbox="402 1129 1029 1260"> <thead> <tr> <th>Sensitive Environment Type</th> <th>Value</th> </tr> </thead> <tbody> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> </tbody> </table>	Sensitive Environment Type	Value									
Sensitive Environment Type	Value										
Sum =											
7. SECONDARY SENSITIVE ENVIRONMENTS: Use PA Table 10 to determine the score for secondary sensitive environments.		0									
8. RESOURCES: A score of 5 is assigned.	5	5									
T =		50									

WASTE CHARACTERISTICS

9. A. If you have identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4, or a score of 32, whichever is GREATER; do not evaluate part B of this factor.			
B. If you have NOT identified any Primary Targets for the air pathway, assign the waste characteristics score calculated on page 4.		18	
WC =		18	

AIR PATHWAY SCORE:

$LR \times T \times WC$   
82,500

(Subject to a maximum of 100)

# DRAFT

NOV 06 1990

## SITE SCORE CALCULATION

In the column labeled S, record the Ground Water Pathway score, the Surface Water Pathway score, the Soil Exposure Pathway score, and the Air Pathway score. Square each pathway score and record the result in the S<sup>2</sup> column. Sum the squared pathway scores. Divide the sum by 4, and take the square root of the result to obtain the Site Score.

## Recommendation

Provide a recommendation for site disposition in accordance with EPA guidelines.
