Partnership Agreement for Public Awareness and Organizational Plan (PAP) of Unexploded Ordnance (UXO) at Dolly Sods Monongahela National Forest

MISSION

As partners committed to promoting awareness of unexploded ordnance (UXO) in the Dolly Sods Area of the Monongahela National Forest, we will use the "Public Awareness and Organizational Plan" (PAP) to make visitors and local residents aware of the risks to human health and the environment from the hazards of the unexploded ordnance resulting from past Department of Defense (DoD) operations in this area. We will strive to develop and foster understanding, trust, cooperation, and the exchange of information with stakeholders to accomplish these goals.

GOALS

1. Educate the public without alarming.
2. Ensure that stakeholders understand that public safety is the primary concern.
3. Serve the public's information needs.
4. Foster and maintain trust among stakeholders.
5. Review and update the PAP at least annually to ensure it is consistent with our mission.
6. Support the Federal and State Fire Suppression Objectives in potential ordnance areas.

Public Awareness and Organizational Plan (PAP) Of Unexploded Ordnance (UXO) at Dolly Sods Monongahela National Forest, WV

Grant, Tucker and Randolph Counties

January 2004

1. Plan Overview:

This plan provides a process to educate the public on the hazards of unexploded ordnance (UXO) and the organizational procedures associated with the management of these hazards. Several removal actions have been conducted. Due to current technology, terrain and equipment limitations, we cannot guarantee complete removal of all UXO. Therefore, an ordnance (UXO) risk remains resulting in a hazard to the users of the area.

The objective of this plan is to manage the risk to public safety from the hazards of any unexploded ordnance resulting from past Department of Defense (DoD) activities at the Dolly Sods area.

This is accomplished by increasing the lines of communication and awareness among the public and stakeholders without causing alarm. The plan requires the involvement of those who are active in the policy and decision-making process. It is the responsibility of the U.S. Army Corps of Engineers and the U.S. Forest Service to maintain the plan and uphold responsibilities listed. The Lead Agency for this plan is the U.S. Army Corps of Engineers.

2. Site Description and History:

Dolly Sods is located between Canaan Valley and Seneca Rocks within the Monongahela National Forest in Grant, Randolph and Tucker counties of West Virginia. High upon the Allegheny Plateau, with elevations ranging from 2,600 to 4,100 feet; the area of more than 18,000 acres is well known for its extensive rocky plains, upland bogs and sweeping vistas. In recent years, between 45,000 and 76,000 people visit Dolly Sods annually. The remoteness, back to nature experience and limited human influences attract adventurous hikers, mountain bikers, anglers, hunters and berry pickers.

The area is named for the pioneer Dahle (Dolly) family, which formerly owned and cleared some of the area for grazing. Logging occurred in the area in the late 1800s and came to an end between 1910 and 1913. Fires from logging operations burned so hot that the topsoil and humus layers were destroyed. This is what helped create this unique environment. The U.S. Forest Service purchased the land, and in the 1930s the Civilian Conservation Corps planted red pine and other conifers as well as aided in the construction of Forest Service Road 75.

Many of the lands now referred to as Dolly Sods were acquired by the U.S. Federal Government between 1916 and 1939, under authority of the Weeks Act of 1911. This act sanctioned the purchase of lands for natural resource management purposes. During 1943 and 1944, military maneuver exercises and artillery/mortar practice were conducted in the area by the U.S. Department of the Army as training for involvement in World War II. Dolly Sods was a part of the 2,181,000 acres that were used for such training. This total acreage is known as the former West Virginia Maneuver Area.

It is documented that rounds fired during military training in the Dolly Sods area included 57 mm and 105 mm projectiles and 60 mm, 81 mm and 4.2 inch mortars. The property was returned to the U.S. Forest Service in 1950.

In 1970, 10,200 acres of Dolly Sods were designated as the Monongahela National Forest to protect their unique scenic qualities. The Dolly Sods Wilderness Area was created by an act of Congress in 1975 to preserve and protect the area with special opportunities for solitude, primitive recreation and other scientific, educational, scenic and historical values. Management efforts within the 10,215 acre Wilderness Area (its boundaries do not coincide with the 1970 Scenic Area boundaries) focus on allowing the forces of nature to reclaim the land, returning it to a natural appearing state. Today, 2268 acres of Dolly Sods along Forest Road 75 have the designation of Scenic Area, while 202 acres west of the current Wilderness Area boundary do not have any special designation.

3. Ordnance Project Background:

Immediately following maneuvers in the area, the Department of the Army conducted an ordnance clearance prior to returning the land to the U.S. Forest Service. In 1991, an ordnance removal project was authorized under the Defense Environmental Restoration Program for Formerly Used Defense Sites (DERP-FUDS).

Ordnance response actions occur at sites that were contaminated while under the control of the Department of Defense (DoD), but were transferred out of DoD control prior to 1986. DoD delegated authority for executing ordnance response activities at FUDS to the U.S. Army Corps of Engineers (USACE) through Headquarters, Department of the Army (HQDA). The USACE Huntington District is the Geographic District having project management responsibilities, and technical support is provided by the U.S. Army Engineering and Support Center in Huntsville.

The Huntington District managed the following remedial activities.

- Findings and Determination of Eligibility by DERP-FUDS (1991-1992)
- Feasibility Study was conducted on 281 acres of the Dolly Sods Wilderness Area. Thirteen (13) ordnance pieces were located within 6 to 24 inches of ground surface, and a Remedial Action Plan was conceived (1991-1992)
- A list of the ordnance found to date is included in Appendix C of this plan.

The USACE and U.S. Forest Service evaluated areas most likely to contain ordnance that posed a threat to the public (trails, campsites, cabins). The Forest Service marked the trails for the Risk Assessment contractor to improve removal efficiency. They also trained a risk assessment contractor to act for the Service in identifying and protecting the Cheat Mt. Salamander. As a result, the Environmental Assessment was expedited and the Dolly Sods North Area Risk Assessment was completed at least one year ahead of schedule.

Two environmental assessments were initiated in 1995. The project was divided into two areas: Dolly Sods Wilderness Area (DSWA) with 10,215 acres and Dolly Sods North Area (DSNA) with 6,169.5 acres.

The Environmental Assessments and Finding of No Significant Impact were completed in 1997 for DSWA and 1998 for DSNA.

The Dolly Sods Wilderness Area removal action included searching and clearing 21 miles of trails to 20 feet on each side, and to a one-foot depth. One hundred and one campsites were searched and cleared to a four-foot depth.

The Dolly Sods North Area removal action included searching and clearing 23 miles of trails to 20 feet on each side, and to a one-foot depth. Blackbird Knob (99 acres of open land) was searched and cleared to a one-foot depth. Seventy-five campsites and four hunter structures were searched and cleared to a four-foot depth.

The ordnance removal action greatly reduced the risk to the public. The concern was not so much on stepping on ordnance as it was on building a fire near or driving a tent spike through a piece of ordnance. Ordnance removal focused on factors such as cost, environmental impact, and reduction of public risk. As a result:

- Trail risk was reduced by 47.6%; campsite risk reduced by 58.9%.
- Twelve (12) HE 81mm and two 60mm HE mortars were found and safely detonated in DSWA; 32,592 anomalies were excavated.
- One HE 60mm and 26 4.2-inch mortars were disposed of in DSNA.
- There were 108 pounds of scrap removed from the Wilderness Area and 1,043 pounds removed from DSNA.

4. Highlights of the Public Awareness Program:

A. Purpose

Provide concrete details on public awareness actions to be taken. Develop a strategy for communicating with stakeholders in the pursuit of the established goals. To be effective, the public awareness program must be gauged according to the public's need for information and its interest and willingness to participate in the process. The necessary ingredients in this plan are simplicity, quality, well represented input, ownership by the responsible parties and coordinated reviews.

The Dolly Sods Restoration Team includes or is represented by the following agencies:

- WV Division of Natural Resources
- WV Division of Forestry
- WV Department of Environmental Protection
- U.S. Forest Service
 - Monongahela National Forest, Cheat/Potomac Ranger District
- U.S. Fish and Wildlife Service
- U.S. Army Corps of Engineers
 - Huntington District
 - Huntsville Center

B. Goals

- i. Educate the public without alarming
- ii. Ensure that stakeholders understand that public safety is the primary concern
- iii. Serve the public's information needs
- iv. Foster and maintain trust among stakeholders
- v. Review and update the PAP at least annually to ensure it is consistent with our mission
- vi. Support the Federal and State Fire Suppression Objectives in potential ordnance areas

C. Areas of Responsibility

USACE:

- Maintain and update PAP plan
- Conduct ordnance recurring reviews (at least every five years)
- Generate and provide ordnance signs to U.S. Forest Service
- Monitor ordnance signage semi-annually
- Database management and information dissemination
- Ordnance training for local fire departments

U.S. Forest Service:

- Fire Suppression/Safety Plan
- Maintain local contacts (Volunteer Fire Departments, Sheriff Departments, Community Leaders, Newspapers)
- Ordnance Reporting and Notification to US Army EOD at Ft. Meade and WVDEP
- Send notification of ordnance finds to USACE Huntington District
- Generate, place and monitor trailheads and trail markers
- Place and periodically monitor the ordnance signs at trailheads (April-December)

5. Linking the Modes of Communication with the Stakeholders

Communicating to the public is the center of this plan. This plan is a product of (four) basic steps as shown in Appendix A:

- i. Identify the stakeholders and how they are impacted from a human health (HH), social / economical (S/E), or political (P) standpoint.
- ii. Understand enough about the stakeholders to determine how best to provide information to them.
- iii. Determine where the respective stakeholders will find these forms of media.
- iv. Ensure that responsibility is given to a party to ensure that the media is updated and in the correct location.

6. Notification Process for Ordnance Findings

See Appendix C for the generally accepted method of reporting suspected ordnance.

7. U.S. Forest Service Fire Suppression/Safety Plan

The protection of private property, the National Forest, public safety, and important resource values are the priorities being balanced in the Fire Suppression/Safety Plan. The plan (Appendix D) breaks Dolly Sods into fire management areas depicted by a code. Each code identifies the area, the risk level for finding ordnance, and the fire suppression strategy. Generally, the higher the risk level, the lower the fire suppression activity.

8. Other Management Activities

Management actions that require earth disturbance, use of heavy equipment or explosives such as resource improvement projects, special use permit authorizations, and search and rescue operations, must be aware of the ordnance risk. Prior to any motorized vehicle use or ground disturbing activity in areas where ordnance was not removed, a visual inspection of the ground must be done. If anything is in question, the notification process of this plan is in effect. All activity must be coordinated with the Forest Service.

9. Updating the PAP

A review of the plan, procedures, phone numbers, and media contacts will be done annually and updated as necessary.

10. Appendices

- A. Lines of Communication Chart
- B. List of Found Ordnance
- C. Notification Process For Ordnance Findings
- D. U.S. Forest Service Fire Suppression/Safety Plan
- E. List of Contacts and Interested Parties

11. Disclaimer

The above Public Awareness Plan is a good faith agreement among the respective agencies. The Agencies will attempt to execute their responsibilities outlined in this plan in accordance with their overall fiscal responsibilities and the receipt of appropriate funding. This Plan does not commit the agencies to any activity for which funding is not made available for through their respective budgetary processes.

APPENDIX B

Found Ordnance

APPENDIX C

Notification Process for Ordnance Findings

Notification Process for Ordnance Findings

These are the generally accepted methods of reporting suspected ordnance.

- **Public reporting of suspected ordnance finding:**

1. Do not touch, move or dig near or around suspected ordnance
2. Walk away in the direction you came
3. Identify the area on a map or by terrain feature
4. Report immediately to:

U.S. Forest Service (304) 257-4488
or weekends/ after hours to:
U.S. Forest Service 1-888-283-0303
WV State Police (304) 257-1411

- **Agency reporting of suspected ordnance finding:**

1. Notification of U.S. Forest Service Employee
2. U.S. Forest Service verifies the find
3. Call U.S. Army Explosive Ordnance Disposal at:

744th Ordnance Company (EOD)
Bldg 68
Ft. Meade, MD 20755
Phone: (301) 677-2466 (24-hour number)
(301) 677-2468 / 2471
Fax: (301) 677-2490

4. Provide courtesy information to Division of Water and Waste Management and USACE Huntington at the earliest convenience (Permit no longer required).

WV Department of Environmental Protection
Division of Water and Waste Management
1356 Hansford St.
Charleston, WV 25301
Phone: (304) 558-5393
Fax: (304) 558-0256

Rick Meadows, Program Manager
USACE Huntington
502 Eighth Street
Huntington, WV 25701-2070
Phone: (304) 399-5388
Fax: (304) 399-5715

- **Information to be included in Agency Reporting:**
 1. Date found
 2. Contact info of person who found it
 3. Coordinates/location
 4. What type of ordnance was found
 5. What happened – injury or no injury – how was it reported?
 6. Is photo available?
 7. Was ordnance disposed of properly?
 8. Name of Forest Service person who verified the finding

- **The U.S. Forest Service personnel must be available upon the arrival of EOD:**
 1. Contact State Fire Marshall's Office and notify them of the find, how, and when it will be handled.
 - Phone: (304) 558-2191 ext. 4
 - Phone: (800) 233-3473
 - (In the event of an accident during disposal or after normal business hours)*
 2. UXO records shall be kept on file at the Potomac Ranger District.
 3. EOD is responsible for maintaining permanent records for all UXO actions.

APPENDIX D

Fire Suppression/Safety Plan

June 28, 2004

FIRE SUPPRESSION/SAFETY PLAN
Unexploded Ordnance Area
Dolly Sods

Everyone needs to recognize that any fire in this area has unique circumstances, such as unexploded ordnance and the fact that a portion of this area is wilderness, that warrant additional safety considerations. Not only do we have to consider firefighter safety, both federal and the local volunteer fire departments, adjacent landowner safety, as well as the general public. This safety plan was developed using the Unexploded Ordnance Suppression Plan listed in Appendix One. If a wildfire did start within the Dolly Sods area, the critical safety issues will be assigned as follows.

Dispatcher duties:

- Brief the line officer or the acting and expect them to report to the scene ASAP.
- Confirm that a copy of the November 2003 USACE, Huntington District “Dolly Sods Found Ordnance Map” is available at the fire scene and is located in the District and Forest Emergency guide.
- Contact the Forest Public Information Officer, PIO, to assist in information transfer needs.
- Contact the Forest Law Enforcement Officer, LEO, to help manage access/traffic issues.
- Contact the WV DOF to establish lines of communication in reference to fire suppression operations.
- Incorporate the Corps Of Engineer Public Awareness Plan, currently in draft state.
- Request a spot fire weather forecast from NWS in Sterling, VA. 703-260-0106.
- Contact the Forest Supervisor to advise of the developing situation and establish appropriate update protocol.
- Prepare any needed Forest Supervisor road or area closure orders.
- Notify EACC of the need for specialized equipment/personnel.

Incident commander duties:

- Evaluate the location of fire and base suppression strategy on the approved unexploded ordnance plan. If the fire is not on Forest Service lands all we can do is inform the firefighters of the risk.
- Get permission from Forest Supervisor to use motorized or mechanical equipment.
- Get permission from Regional Forester to use tractors, tractor/plows, or other tacked or wheeled mechanized equipment.
- Establish communications with either the Potomac Dispatch and/or the Central Dispatch ASAP.
- Establish IC Post to function as a check in post for all resources to report to and receive their job assignments and standard briefings. Confirm good communications exists with Dispatch.

- Additionally, brief all firefighters on the risk of unexploded ordnance. This includes VFD personnel. All firefighters **must be briefed** and given the opportunity to decline participation should they feel the risk is unacceptable.
- Consider the alternate suppression strategies listed in Appendix Two. Several will require Forest Supervisor or Regional Forester approval. NOTE: it may take up to 24 hours to have aviation assets on site due to scheduling, communication, and safety issues.
- Minimize personnel exposure along fire line.

Line Officer duties:

- Be available to report to the fire scene ASAP or have the acting fulfill this obligation. The incident commander will need your help taking care of all the non-technical distractions.
- Consider the evacuation of public based on the severity of the incident.
- Expect pressure to use mechanized equipment to access the fire regardless of the location of the fire.
- Expect pressure from the public to protect their lands, even if the threat is minimal.
- Expect the press to be on scene.

Public Affairs Duties:

- Develop list of local media contacts in advance of an incident.
- Coordinate with the RO liaison and with the RO Public Affairs Officer.
- Be on-site, if possible, to deal with media.

Law Enforcement Duties:

- Help develop and enforce necessary access/egress transportation plans.
- Manage possible irate public issues.
- Implement any needed evacuation measures.

Appendix One
Unexploded Ordnance Suppression Plan
Dolly Sods Area

The plan is based on the following premises:

- The alternative of “no action” is unacceptable. It is unreasonable to simply ignore a fire within the unexploded ordnance area just because we have additional hazards to address.
- The unexploded ordnance issue presents an imminent and substantial danger to the users and maintainers of this area.
- We expect any fire in this area will generate additional anxiety for both the public and our employees because of less aggressive containment strategies employed. Public misunderstanding is likely.
- The firefighting strategies listed are not risk free. We cannot quantify absolutely the risks associated with 60-year-old ordnance. It seems appropriate to note that the general public is not provided a risk free experience if they wonder off the designated trails.
- Based on fuel types, location, and prevalent winds it does not appear that even a moderate threat to public homes or other structures exist.
- The strategies, risks, and likely public concern require the Forest/Region to become more actively involved in fire incidents here than elsewhere on the Forest. A more aggressive public awareness program is being developed.
- The maximum published public withdrawal distance used by the COE will be used as the minimum safety zone for consenting firefighters. It is 447 feet for the 155 mm M107 round, which is the largest known ordnance found in the Dolly Sods Area. (Development of Primary Fragmentation Separation Distances for Accidental and Intentional Detonations, Crull and Zehrt)

Decisions concerning suppression strategies should be based on the information displayed on the base map along with the extended fire weather forecast. The base map displays fire management polygons, which contain the following information:

- EXISTING FIRE LINE – This is a combination of cleared trails and natural barriers, ex streams and rock outcrops.
- RISK LEVEL – Identified for each polygon. The risk levels are:
 - C - CONFIRMED - ordnance contamination confirmed
 - S - SUSPECTED – ordnance likely due to proximity to impact area or historical information.

- U -UNLIKELY – no reasonable evidence that unexploded ordnance will be located.

- VEGETATION TYPE - For each polygon
 - NORTHERN HARDWOOD (closed canopy)
 - OAK (closed canopy)
 - SOD
 - CONIFER
 - UPLAND BRUSH (blueberries, laurel, thickets)

Suppression Strategies

CONTAINMENT – The least aggressive strategy, allowing fire to burn itself out within existing boundaries. The fire is restricted within determined boundaries established prior to or during fire activities. Limited suppression action can reasonably be expected to check the fire spread under prevailing conditions.

- Appropriate where the polygon has a confirmed risk of contamination, when the natural barriers are strong, or when spread rate is considered low.

CONTROL – Complete a control line around fire and any spot fires. Burn out adjacent to line; hot spots threatening line are cooled down until line can reasonably be expected to hold under foreseeable conditions.

- Given the safety issues, this option is currently not considered viable.

Appendix Two
Dolly Sods Unexploded Ordnance
Alternative Suppression Strategies

- Get Forest Supervisor to authorize motorized and mechanical equipment such as chainsaws, portable pumps, and leaf blowers in Wilderness Area.
- Have Forest Supervisor authorize aircraft use (fixed wing or rotor) for retardant drops, supply deliveries, or personnel shuttles in Wilderness Area. Fixed wing retardant possibilities may exist from either Virginia or North Carolina.
- Use a Call When Needed helicopter equipped with foam applicator. The helicopter would also provide a safe platform for monitoring fire behavior. The closest vendors are located in Gettysburg, PA.
- Get Forest Supervisor to approve helispot locations in Wilderness Area.
- Schedule and position resources so that they can be on site at Jaybreak so that suppression activities will reduce the risk of heat detonating a round.
- Use nighttime suppression activities along cleared trails to reduce risk of heat detonating a round, but be aware of the additional risks associated with nighttime firefighting activities and consider that trails were cleared to 20 feet either side of the trail, but that unexploded rounds located 30 feet away and detonated by heat could still harm a person located on the trail.
- Use the backfire technique ONLY IF NO ATTEMPT IS MADE TO HOLD THE LINE ONCE IT IS IGNITED.
- Have the US Army Explosive Ordnance Disposal clear a path to be used as a fire line.
- Have Regional Forester approve use of tractors, tractor plows, track or wheeled mechanized equipment if needed in Wilderness Area, but consider hazards of unexploded ordnance.
